A STRAWBERRY MOUND.

Select a spot of ground in your dooryard, or elsewhere, where you do not design plowing, and make a small mound of turf, litter, a few stones, etc., with soil enough to fill up all the crevices, and let the whole be firmly pressed together, so that is shall settle as little as possible .--Then collect a quantity of pebel-stones of various sizes, and after covering the mound to the debth of four or five inches with gravelly soil, commence at the bottom and enclose it with a circle of the larger peb bles you have, pressing them firmly into the soil ; then at the distance of five or six inches up the side of the mound, place Valuable Real Estate. another circle of smaller pebbles, and a) continue until the surface of the mound is all divided in this manner into sections. Now procure some fine strawberry plants and place a row of them in each division,

and next year, if your vines do well, you will have not only a nice green mound, which will be an ornament to your yard, but also a very beautiful one. There mounds may be made of any desirable size. Three feet in diameter, and the same in perpendicular height, is about the size which will usually be found conveni-ent.—Ohio Farmer.
