IRON IN THE BLOOD.

It is well known to the medical profession that IRON is the Vital Principle or Life Element of the blood.—
This is derived chiefly from the food we eat; but if the food is not preperly digested, or if from any cause whatever, the necessary quantity of iron is not taken into the circulation, or becomes reduced, the whole system suffers. The had shood will irritate the heart, will clog up the lungs, will obstruct the liver and will send its disease-producing elements to all parts of the system, and every one will suffer in whatever organ may be predisposed to disease.

The great value of

IRON AS A MEDICINE

is well known and acknowledged by all medical men. The difficulty has been to obtain such a preparation of it as will enter the circulation and assimitate at once with the Blood. This point, says fir. Hayes, Massachusetts State Chemist, has been attained in the Peruvian Syrap, by combination in a way before unknown.

American WATCH IS THE BEST It is crade on the best principle, while the foreign witch is generally made on no principle at all. The foreign watch is mostly made by women, and boys, sy as no White their habor is clean, their were is dear at any price. Such watches are made without plan, and sold without guarante. They are irregular is construction and quite as irregular in movement. They are designed only to sell, and the bayer is the party meet thoroughly sold. These who have kept sucress, "lepines" and "Swiss levers" in professed repair for a few years will appreciate the truth of our statement.

THE PLAN OF THE AMERICAN WAICH

THE PLAN OF THE AMERICAN WATCH. THE PLAN OF THE AMERICAN WAICH.

Instead of being made of several hundred little pinces, screwed together the body of the American Watch of SOLID PLATES. No jar interferes with the harmony of its working, and no sudden shows can throw its machinery out of gear. In riding on any besiness pursuit, it is all held together as a truly as a single piece of metal. It is just what all machinery should be—

We not only secure cheapness by our system, but quality. We do not pretend that our watch can be longlit for less money than the foreign make scheres, but that for its real value it is sold for one half the bot that for its real value it is sold for one-hair the price.

Oth SOI DIER'S WATCH (wanted Wm. Etlery.) is what its name indicates—Solid, Selsgrantial, and all ways Reliable—warranted to stand any amount of marching, riding or flighting.

Our new hicher quality of Watch (na ned P. S. Bartlett) is similar in size a...d general appearance, but has more jewels, and more claborate finesh.

Our Ladie's Watch, recently brought out, is pu' up in a g-eat variety of patterns, many of the ar of rare beau ty and workmauship, is quite small but warranted to keep time.

Our Young gentleman's Wa'ch is neat, not large and just the thing for the pock tof Vanua America.

Our Young gentleman's Wa'ch is next, not large and just the thing for the pock t of Young America.

The proof of the merits of our Watch, may be found in the fact that we now employ over seven hundred workmen in our factories, and that we are still anable to supply the constantly increasing demand.

Our three-quar es Plate Watch is thinner and lighter that the others we have described, its fine chronome or balance is delicately adjuste; to correct the variation caused by changes of temperature. These watches are the fruits of the latest experiments in chronometry, and are made by our best workmen, in a separate department of our factory. For the finest time keeping qualities they challenge comparison with
