BAD WATERING OF LAWNS RUINS THEM Gentle Soaking Spray Once a Week Better Than Hazard Wetting

Bad watering is the cause of almost as many poor lawns as droughts, according to the landscape gardener of the United States Department of Agriculture. Frequent watering of merely the surface of the grass makes the roots of the grass grow near the surface and these roots should be made to grow as deep as possible in order to secure a fine lawn that will resist the hottest weather of summer.

The man who enjoys watering his lawn in the evening is not advised to return after work to leaving the stream on for a number of hours once a week. If he will divide his lawn area in six parts and confine his attention to a different part each evening he will obtain practically the same results in the long run. Haphazard watering every evening is not advisable. He should be careful, also, to use merely a gentle spray and not continue watering to such an extent that water runs off, as such water does not penetrate to the roots of the grass for it may remove loose dirt from the grass roots and expose them to drought. The strong stream of a hose should not be used, as it helps to expose the roots unnecessarily.

Don't Wean the Baby all at Once

AND don't wean him on cow's milk. Nurse your baby as long as you can, and when the baby stops gaining on your own breast milk, send the coupon for this trial package (free) of

Nestle's Food. On the first day give your baby Nestle's once instead of a breast feeding. On the second day give Nestle's twice. On the third day—Nestle's three times. And so on till the baby is completely weaned—on Nestle's—and gaining once more regularly week by week. If you wean your baby on cow's milk, you are making his little body face the greatest dangers of our day—the dangers that take thousands of babies from our arms. Every time you give your baby one mouthful of cow's milk you are making that little child fight dirty dairies—sick cows—summer complaint—consumption. For authorities tell you that in one state alone—where laws are strict—one cow in three has consumption—and your own doctor tells you that your baby may get summer complaint from cow's milk. You cannot tell whether milk comes from a healthy cow in a clean dairy. But our scientists do it for you. Nestle's is made from the pure milk of healthy cows in sanitary dairies. All the cow dangers are changed—all the baby needs are added. Send the coupon today for the package of Nestle's (enough for 12 feedings) and the specialists' book of instructions.
