"But I don't know how to skate," Helen protested. "You know I have never been on a pair of skates in my life, and to begin by going on a skating party is too ridiculous."

"Not a bit of it. All you need is a little bit of confidence, that's all. After you get a pair of skates on you'll change your mind about the entire thing."

"But I won't, I tell you. I'm afraid. I wish you wouldn't insist on my going."

"I'm not insisting," said Warren, mindful of his resolution not to become impatient. "I'm not asking you to do anything that you do not wish to do."

"You'll learn to dance with some one in a couple of lessons," said Warren reassuringly. "It will take longer to learn to skate, but you will find it a little easier."

WHITE WYANDOTTES

By Louis Paul Graham

In an effort to produce a breed of fowls which would combine great egg-laying qualities with good table qualities—a so-called general purpose fowl—the resourceful American breeders have produced three great breeds—Plymouth Rocks, Wyandottes and R. I. Reds.

The hens are remarkable layers of large tinted brown eggs. In some strains the shell color is almost white, in others it is a coffee brown. They will become broody, sit, hatch and rear chickens, making excellent mothers. The chicks are hardy and vigorous, growing rapidly and feathering most rapidly of all the American breeds.

It has small fine bones, is very full in breast development and grows big evenly, maintaining good flesh at all ages. The hens are remarkable layers of large tinted brown eggs. In some strains the shell color is almost white, in others it is a coffee brown.

They will become broody, sit, hatch and rear chickens, making excellent mothers. The chicks are hardy and vigorous, growing rapidly and feathering most rapidly of all the American breeds.

When full grown the males weigh from 6 1/2 to 8 pounds, the females from 5 to 7 pounds. They are ready to lay from 5 to 6 months of age. All Wyandottes are generally recognized as good winter layers and the White variety is the leader in this respect.

For winter eggs bring twice as much in the market as do summer eggs. They will become broody, sit, hatch and rear chickens, making excellent mothers. The chicks are hardy and vigorous, growing rapidly and feathering most rapidly of all the American breeds.

How to Combine Utility With Fancy Many mistaken notions have been entertained by the breeders of utility fowls...

Miss Fairfax Answers Queries MARRY HER DEAR MISS FAIRFAX: I am twenty-five, and two years ago I kept company with a lady of the same age.

Wedding Ceremonies in Central Pennsylvania Special to The Telegraph Mechanicsburg—Weir M. Empley, of Silver Spring township, and Miss Helen E. Bobb, of New Kingston, were married on Thursday evening at the Silver Spring manse, by the Rev. T. J. Ferguson.

Enthusiastic Singing Is Feature at Tabernacle Services at Mechanicsburg Special to The Telegraph Mechanicsburg, Pa., Jan. 16.—If anyone thinks Mechanicsburg is lacking in religious enthusiasm, just let him come to the Miller tabernacle meetings.

BOBSLED HITS STONE WALL Special to The Telegraph Lowistown, Pa., Jan. 16.—Several young people engaged in coasting on a hill at Yeagertown, three miles from here, were injured when a large bobsled crashed into the stone foundation of an old barn.

Simplicity of Construction and Accessibility Two of the Principal Factors Demanded

Comfort and Convenience of Flock Using Devices Should Be Given First Consideration

By Prof. Harry R. Lewis Head of the Department of Poultry Husbandry at the N. J. State Agricultural Experiment Station

Poultry appliances that save labor are always in demand—but the question of expense must be considered. Many of these devices can be bought more cheaply than you could make them at home—but a work bench and a few tools will save many a dollar and occupy you on dull days.

The home worker, however, must consider the necessity of his flock and not only himself in saving labor. The flock is to use the apparatus, and it should be made as comfortable and accessible for such use as possible.

In the selecting and planning of the appliances and equipment of the poultry house three special factors should be borne in mind: the first and foremost is simplicity. That is, all the internal fixtures should be of simple design and construction, thereby making it more sanitary and reducing the cost of construction.

Portability is of extreme importance in the laying house. The last factor is that of the location of the many appliances and portions of equipment. The successful poultry raiser is he who remembers that the house is a shelter for the birds and the capacity of the house in large measure is determined by the number of square feet floor space.

In the following paragraphs I shall briefly outline some of the essential features of the poultry house equipment which go to provide these standard requirements, and hence save labor.

surplus cockerels and for the shutting up at short notice and for a short time only, of any hen which is out of condition and which will later be removed to the hospital.

A large box or frame can be constructed in the corner of each pen to be used as a dust vat. The home-made dust box can best be formed by nailing together two pieces of 12-inch hemlock boards in the form of a letter L.

These should be four or five feet long. They can be placed in the corner, and by using the outer walls of the buildings for the other two sides, they will form a box. The ends can be nailed to cleats on the wall and the box filled with dusting material.

The sides of the box should be high enough to keep out litter and other foreign material. In the feeding of poultry two special appliances are needed, namely, troughs and hoppers. There are many desirable manufactured types, usually made of a galvanized metal.

In fact, there are many varieties that the poultryman is often at a loss to know which is best. Metal feeding appliances are sanitary, but relatively expensive. It is possible to construct a hopper of the equipment at a minimum cost.

For the feeding of wet mash, sprouted oats, chopped vegetables, etc., feed boxes or troughs are necessary. Common greenhouse flats, if the bottom is covered with clean small corks, for a larger flock long V-shaped or square troughs can be constructed, which answer the purpose in every particular.

The hopper should be automatic in operation, so that as fast as the birds eat the material a fresh supply will come down and take its place. Hoppers with small troughs are convenient, so that as fast as the birds eat the material a fresh supply will come down and take its place.

CAMP HILL WATER CASE Citizens Decide to Appeal to Public Service Commission Special to The Telegraph Camp Hill, Pa., Jan. 16.—Property owners and taxpayers of Camp Hill attended the citizens' committee meeting last night, when action was taken against the decision recently handed down by Judge Selbert, of Perry county, favoring the Riverton Water Company, which was charged with increasing the water rate of that borough 200 per cent.

MEMBERSHIP INCREASED Special to The Telegraph Mechanicsburg, Pa., Jan. 16.—Election of officers at the annual meeting of the Businessmen's League resulted as follows: President, Eugene A. Burnett; vice-president, Robert H. Thomas, Jr.; secretary, C. I. Swartz; treasurer, M. E. Anderson; governors, Joseph M. Lemon, George S. Constock, Jr., and Dr. J. H. Swartz. An amendment was adopted, increasing the membership limit from 75 to 100. A smoker was held at the conclusion of business.

SIGNERS TO BE DISCHARGED Special to The Telegraph Selinsgrove, Pa., Jan. 16.—Right in line with their campaign to decrease drinking among their employes, the American Car and Foundry Company, at Berwick, directed the discharge of all employes who sign applications for liquor licenses.

CAUGHT IN MEAT CHOPPER Quarryville, Pa., Jan. 16.—Howard F. McComsey was badly injured yesterday afternoon while engaged in making sausage on the farm of his father. In pushing the meat into the knives his sleeve caught, and he was whirled around, and his right hand was caught in the knives.

Make Your Hens Lay When Eggs Are High Anyone can get plenty of eggs when eggs are cheap—that's what makes them cheap. The people who make money from poultry get eggs when the others cannot.

You can make your hens lay and get your biggest profits when your neighbors' hens aren't earning their feed bills. It's all a matter of knowing how.

Formerly I had what I called bad luck with my poultry; after reading I. C. S. instruction papers, I found that it was mismanagement that killed my poultry," says John S. Barner, Vilas, Pa.

For the last eight years I have been trying to find out how to keep poultry. My feed bill today is only half as much as it was a year ago, and my profits are almost twice as great as they were before I enrolled in the I. C. S. Poultry Course," says O. W. Senger, 509 E. 11th St., Pueblo, Col.

Mail the Coupon For Full Particulars Fill out and mail the coupon now and receive, FREE, a handsome illustrated 64-page book, describing the I. C. S. Courses in Poultry Farming.
