Catarrh is a germ disease and the only way to cure it so it will stay cured and never come back is to kill and driven come back and first and nostrils. The alittle time the catarrh will stop. The trouble with most treatments, like sprays, salves, creams, greasy balms, lotions, etc., is that they give only temporary relief by opening up for a while the elogged head, throat and nostrils. In a little time the Catarrh comes back as bad as ever.

People who suffer continually from catarrh should drop such temporary makeshifts and get something that really gets at the root of the disease and stamps it out. There is nothing better for such cases than breathing into your nose and lungs the soothing, healing, gets at the root of the disease and stamps it out. Need Attention in February and March or Face May Stay Covered

Now is the time to take special care of the complexion if you wish it to look well the rest of the year. The February and March winds have a strong tendency to bring out freekles that may stay all Summer unless re-moved. Now is the time to use othine —double strength.

This prescription for the removal of freekles was written by a prominent physician and is usually so successful that it is sold by druggists under guarantee to refund the money if it fails. Get an ounce of othine-double strength, and even a few applications should show a wonderful improvement, some of the smaller freekles even vanishing entirely.—Advertisement.
