Trial Judge Thought Frank Was Innocent

Special to The Telegraph
Atlanta, Ga., May 22.—In a letter forwarded to-day to Governor Slaton, and the State Prison Commission urging clemency for Leo M. Frank, Judge A. G. Powell, a former member of the State Court of Appeals, asserted that the late Judge Roan, who presided at Frank's trial, often had expressed to him the belief that Frank was innocent of the murder of Mary Phagan.

"I was an intimate friend of Judge Roan," Judge Powell's letter stated. "If he were living I would not attempt to speak for him. Since his mouth is closed by death, I feel it is due to him and to Frank that I should give you the benefit of what I know of how he felt as to the defendant's guilt."

At Judge Roan's request, Judge Powell said, he had prepared portions of the court's charge to the jury. "I mention this fact," the letter added, "merely to show I had opportunity of intimate knowledge of the state of Judge Roan's mind."

Judge Powell said he was unable to explain "why Judge Roan, with these views, did not grant the new trial, which from conversations with him I fully expected him to grant."

S. C. WHITE MINORCAS

Minorcas, Spanish and Andalusians, are all of one race—all from one country of origin—Spain. The former have been known to and bred by the English for almost a hundred years. According to some authorities, the very earliest name of the entire group was Minorcas, White Faced, Blue and Black, and later, when some white sports from the black variety were successfully bred together and reproduced—the White Minorcas.

White Minorcas have been developed from sports or albinos of the black variety, and as layers of large white eggs and in other characteristics equal their black cousins. They are large, striking fowls, their pure white plumage, legs, beak and ear-

lobes contrasting strongly with the brilliant red of their large combs and wattles. In the male the comb should be heavy, neatly serrated and stiffly erect. In the female the comb is thinner and folds, hanging over one side of the head.

These fowls, together with their black sisters, hold the record for the production of the largest white eggs and at first glance, on account of their size—males 6 1/4 to 8 pounds; females 5 1/2 to 6 1/2 pounds—would appear to be the ideal fowl for stocking an egg farm specializing on extra large white eggs for a fancy trade. In theory this is good, in practice impossible. The White Minorca is not a rugged fowl, it cannot be raised in thousands as successfully as the Leghorns.

the Peruvian Gold Mine Company, with which McCune was connected. The offices of this company are in Wilmington. It was stated that \$200,000 in stock subscriptions has been paid into the company's offices as a result of a campaign with circulars. Recently McCune reported that burglars had robbed his home here of \$30,000 worth of jewelry.

Pleasure and Profit

You can have both by keeping poultry.

But pleasure in poultry keeping depends largely upon the profits. To make money with poultry, you must know how to care for them.

The International Correspondence Schools will train you in the methods that have enabled hundreds to build up profitable back-yard flocks and farms to establish highly-profitable farms.

Earn \$1 an Hour Keeping Chickens

Many men and women who have applied the methods given in the I. C. S. Course in Poultry Farming are making their spare time pay them a dollar an hour. They keep their tables supplied with eggs and meat and have a surplus to sell at high prices.

"By applying the methods I learned from the I. C. S. Course in Poultry Farming, I made \$165.21 profit from 90 hens in the last six months and increased my flock by 100 pullets and 15 cockerels," writes J. B. Myers, Muskogee, Okla. "My profits last year, before I began studying poultry farming, were only \$28.59."

"After failing with poultry four times I enrolled in the I. C. S. Poultry Farming Course, started again, and am making \$24.00 a month from 100 common hens. The Course is worth ten times what I paid for it," says E. J. Hennessey, Hecla, Pa.

Get This Free Poultry Book

An illustrated 56-page book, explaining how you can get the training that will enable you to succeed with poultry, will be sent free on request.

This book tells how you can build up a business from a small beginning. It shows how you can learn to breed and feed for eggs, get the most rapid growth for market, win prizes at poultry shows, and make money from poultry the year around. To get this valuable book

Garage Roofs Must Be Spark-Proof

Shingles or ordinary prepared roofings will not do. They are highly inflammable—dangerous! You need a roof upon which sparks drop dead—a roof that is fire-resisting, weatherproof, and wear-proof. We have it. This roofing is

RU-BER-OID

Pronounced "RU" as in RUBY

ROOFING

COSTS MORE—WEARS LONGER

We can heartily recommend RU-BER-OID. Our customers use it and know that it is permanent and economical.

RU-BER-OID is not only fire-resisting, but it affords an all-year, every-sort-of-weather protection, repelling heat, cold and moisture.

RU-BER-OID far outlasts cheap imitations, because its long-wearing qualities are built in. In hundreds of instances RU-BER-OID is still weatherproof after 20 years wear.

The U. S. Court of Appeals has recently enjoined imitations from using the word "Rubberoid" or any similar name as the trade name or brand "of their roofing."

We sell the genuine,—with the "Ru-ber-oid Man" on the roll, as shown above. We have RU-BER-OID in slate gray and in distinctive Tile Red or Copper Green.

Drop in and see RU-BER-OID when you are in this neighborhood.

POULTRY NEWS

DISEASES PREVENT AMONG YOUNG CHICKS

Something About Their Causes and Symptoms; How to Prevent or Cure

Home Treatment For the Ordinary Troubles of the Amateur

By W. G. Krum
Dept. of Poultry Husbandry, New York State College of Agriculture, Cornell University.

Copyright, 1915.

At this time of year, the amateur poultry raiser, at the mercy of any number of diseases that may make serious inroads on his flock unless he is prepared.

In this article, the author tells how to identify a number of the diseases that are most likely to manifest themselves. Also he tells how to get them in hand before the damage is done.

Many amateur poultry raisers are anxiously looking forward to the brooding season, having in mind their troubles and losses in previous years. Therefore, let us look over the list and see if we cannot get a better insight into the causes, symptoms, cure and prevention of the more common diseases, with the idea of avoiding loss, if possible.

While diseases may not be inherited, yet many times the susceptibility to them is strongly inherited and therefore we should see to it that we breed only from stock that are well bred, strong and vigorous. We should make sure that the birds have been properly housed and fed only wholesome food, and this latter given in such a way that they are obliged to take enough exercise to maintain a good circulation of the blood. It is preferable to have them take much of this exercise out doors.

The hatching eggs should not be kept too long and should be well cared for. Many times weakness in chicks is caused by transferring to brooders or to insufficient heat in the brooders. Overheating, as in too small brooders where they have no way of escaping to a cooler place, gives the same symptoms as chilling.

Symptoms, loss of appetite, lack of activity and a tendency to crowd even after the temperature has been regulated, also looseness of the bowels.

Treatment—This calls for prevention rather than cure. As large numbers die directly or indirectly from this cause, it is well to imitate the other hen in all our brooding systems. Follow above instructions.

Too picking is quite common among young incubator chicks during the first week that they are put into the brooder. If the chicks are taken to the brooder at night instead of in the morning, there is less danger of it. They can then be fed the following morning and kept active. Use chicks to toe picking, feed often but sparingly and scatter the grain into a light litter where they can work for it. In addition throw them some fresh green food, such as clover, alfalfa and green food once or twice daily. This plan will keep the chicks occupied and make them healthy. Under these conditions they will forget about toe picking.

Leg weakness is caused by dampness, insufficient ventilation, improper feeding and lack of exercise. Treatment—Remove the cause, let the chicks put on the ground and feed proper rations.

Sore eyes. The sticking together of the eyelids with a thick, dark-colored discharge is generally fatal. Treatment—Bathe the eyes in a weak solution of peroxide of hydrogen and grease them with vaseline.

Gapes—Symptoms, frequent gasping, breathy, dry, rattling, parassitic worms in the windpipe. These are known as gape-worms. Many of these are coughed up and live in the ground. The eggs are picked up in the nest and thus the trouble continues year after year. Treatment—A feather may be stripped so as to resemble a small paint brush. Moisten this brush with turpentine and quickly thrust into the windpipe when the chicken gapes. It will kill the worms which are coughed up.

To prevent a reappearance of this trouble raise the chickens in new ground the following season. Do not let them on the old run for two or three years. Do not move infested chickens to new area and thus spread the trouble.

Coccidiosis is quite common and is usually fatal. Chicks from poor breeding stock are especially liable.

Symptoms—Drowsiness, stunted growth, common diarrhea. A post mortem shows the caeca or blind intestine enlarged, hardened and often a brick-red color. The liver is covered with yellow spots or particles. This disease is similar to blackhead in turkeys and no cure is known. Treatment—Call for prevention by the use of strong vigorous breeders and thorough disinfection of the brooders with one part crude carbolic acid to three of kerosene or the use of any good strong disinfectant material. Give plenty of sour skim milk or buttermilk from the first feeding.

White diarrhea.—Many forms of bowel trouble are often mistaken for this fatal disease. The milky white diarrhea is usually inherited from the breeding stock, the germs are found in the ovaries of the hens and are transmitted to the chicks, many of whom die at less than ten days of age.

Symptoms, drooping wings, listless attitude, a thick pasty discharge and a wasting away of the body.

Treatment—Liberal use of sour milk. Some poultrymen use a fountain pen filler and force feed into the chick before they are old enough to be taken from the incubator. This trouble can be somewhat avoided by rigid selection and proper care of the breeders.

Moldy feeds and moldy litter are responsible for much of the mortality among fowls and especially young chicks. The mold dust from the litter is inhaled through the lungs, while mold in feed is taken in through the digestive organs. Symptoms.—The bird is inactive and sleepy and stands around with the wings hanging down. The breathing is rapid, with a tendency to catch, and the chicken has little disposition to eat. The excrement is usually white. A post mortem will show soft yellowish growths in the lungs and sometimes in the intestines. There are in size from a pin-head to a pea.

There is no known cure. This is a case calling for prevention by the use of only clean, sweet food and using litter free from mold, and keeping the yards well spaded or planted to some green food.

The best and cheapest tonics are pure air, pure water, wholesome food, plenty of exercise and sanitary surroundings. Most of the commercial feeds are very good. In buying them avoid those with too much millet or other hard shelled grains, but should be fed separately. Be absolutely sure that all foods are free from mold or mold dust.

"The Biggest Word in the Bowman Storehold"

For some. I have been often for your part of advertising sending me always what I write for. I feel I cannot always stop away from your store as being used to some for quite a few years. I remain

From Syracuse, New York State, an order passed through our Mail Order Department. Its conclusion appears above.

Somehow, that writer's innocent confession has touched the keynote of this entire organization.

This Store is her store, though many and many miles away!

Why?

We do not know. It may have been courteous treatment; prompt attention; helpful suggestion; or one, or more of other details that define SERVICE: truly, "the biggest word in the Bowman storehold."

So much is plain: certain members of our store family, through their willingness to serve, have enrolled a staunch customer, and by this single instance, we—all of us feel amply repaid for every effort put forth daily, to be deserving!

Rebuilding has helped rather than hampered genuine service.

Defiance to U. S. Is Favored by Germans

Special to The Telegraph
London, May 22.—The Morning Post's Berlin correspondent sends the following:

"I hear on the best authority that a great conflict is proceeding in Berlin as to how the American note regarding the Lusitania is to be answered. A majority of the war lords favor a sharp and decisive reply, and the Tagliche Rundschau speaks not for itself alone when it says:

"Germany, which at present is resisting six powers, is not afraid to deal with a seventh."

Anniversary Sale Will Close May 29th

Through a typographical error in yesterday's issue of this paper the closing date of the Fifth Anniversary Sale of the Ladies' Bazaar, 10-12 South Fourth street, was incorrectly given. This sale, which began Friday will continue all of next week, closing Saturday night, May 29.

HOPE PROTESTS GAME

At a meeting of the Hope Fire Company Athletic committee last night, it was decided to protest the game played with Rely company's team on Wednesday. The Hope players claim that the correct score was 12 to 11 in favor of the Hope. The score given by the Rely company was 6 to 5 in favor of the Rely. The game will probably be played over.

400 Scranton Teachers Defy Head of Department

Special to The Telegraph
Scranton, Pa., May 22.—Open rebellion of 400 of the city school teachers is now an assured fact, that number having refused to take a five-question examination in "How to Study" set for yesterday afternoon. Instead of taking the test they gathered in the Central high school auditorium and heard a lecture by one of the city physicians who had been invited to address them.

Previous to the adjournment of the meeting they adopted resolutions in which it was stated that the questions to be used in the test had been secretly given out in advance, and that although the sealed envelopes containing the questions sent to the principals of the various buildings were not supposed to be opened until 3.30 o'clock yesterday afternoon, many of them had read the questions the previous night.

Following the meeting neither Superintendent Weber nor the members of the board would make any statement as to what action would be taken, but the matter will probably come up at the meeting of the board Monday night.

Hatching Summer Chicks For Future Broilers and Roasters

There's money for the amateur in raising broilers and roasters for the local markets. Read what Mr. Reese V. Hicks, general manager of the largest poultry farm in the world, has to say on this subject.

"I have had a great deal of experience and suggestions will be found very valuable to all amateur poultrymen and women who are raising poultry on a limited scale."

New Central High Head Doesn't Wax Enthusiastic About School Building

Central High School's new principal attended last evening's session of the School Board. It was Professor Howard G. Dibble's first meeting with the directors, and following the transaction of a comparatively brief program, Professor Dibble made a little speech. Central High School, he declared, pleased him immensely; everything about it, including the student body, was eminently satisfactory, he said, but the physical condition of the Central High School building, he said, was not so satisfactory. He said he had a hard time to get the boys and girls to get there, and he shall lend every assistance in obtaining the proper facilities for these young people.

Much of the evening was devoted by the board to a discussion with Architect C. Howard Lloyd of the progress and possibilities of the new Shimmell building, and it was decided to meet with the contractor on the ground Monday afternoon, at 4 o'clock, to talk over the delay in heating plant installation. The board's solicitor was authorized to collect \$100 rent from the proper parties for the use of the plot at Third and Chestnut streets, and permission was given the Park Department to use a bit of land adjoining the school at Thirteenth and Sycamore streets for additional playground facilities.

JUNIORS' ORATORICAL CONTEST

Special to The Telegraph
Anville, Pa., May 22.—Last evening's annual alumni junior oratorical contest was held at Lebanon Valley College in the Engle Conservatory. The winner was H. Kieffman, of Baltimore, who had as his subject, "The Sphinx of the Nations." He received a \$20 goldpiece. The second prize of \$10 was awarded to R. Dando, of Lebanon, and third prize of \$5 was won by S. Innerst, of York.

NO GAME AT ISLAND PARK

Wet grounds prevented a game at Island Park to-day between the Harrisburg team and the P. R. R. Y. M. C. A. nine. Manager Messersmith will announce his Decoration Day program on Tuesday.

The Foundation Everlasting

Ask the Alpha Dealer

Build Foundations Of Good Concrete

Make your supporting piers and walls of ALPHA Portland Cement, sand, and crushed stone shoveled into forms. The cost is low and you will have a foundation like solid stone, that will not rot or crumble.

ALPHA THE GUARANTEED PORTLAND CEMENT

is the special kind of Portland Cement that we recommend for your use in foundation walls and every other job where strength and permanence are needed. Cheap cements may spoil the job, but when you use ALPHA your work will grow stronger with age. Use ALPHA and be sure of satisfactory results.

ALPHA has been on the market for 24 years. It is a time-tried, tested cement that we know is of unusual quality. We guarantee it to be uniform, pure, live and active, and to more than meet the U. S. Government standard.
