

Children Cry for Fletcher's

CASTORIA

The Kind You Have Always Bought has borne the signature of Chas. H. Fletcher, and has been made under his personal supervision for over 30 years. Allow no one to deceive you in this. Counterfeits, imitations and "Just-as-good" are but experiments, and endanger the health of children—Experience against Experiment.

What is CASTORIA

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It contains neither Opium, Morphine nor other Narcotic substance. It destroys Worms and allays Feverishness. For more than thirty years it has been in constant use for the relief of Constipation, Flatulency, Wind Colic, all Teething Troubles and Diarrhoea. It regulates the Stomach and Bowels, assimilates the Food, giving healthy and natural sleep. The Children's Panacea—The Mother's Friend.

THE CENTAUR COMPANY, NEW YORK CITY.

\$20,000 A YEAR NOT ENOUGH FOR HIM

MRS. JOHN JACOB ASTOR
Little John Jacob Astor, posthumous son of John Jacob Astor, who went down on the Titanic leaving a fortune of about \$70,000,000, most of which went to his son Vincent by his first wife, cannot live on \$20,000 a year, according to his mother, the second Mrs. Astor.

She has just filed a statement in the surrogate court, New York, in which the statement is made that that sum, which he now enjoys, is not sufficient. After giving the date of her appointment as November 13, 1912, the widow says she received no money from the son's estate until December 31, 1913, and that the setting of his allowance at \$20,000 a year took place on August 5, 1914.

The necessary expenditures since the birth of the infant to December 31, 1914, she reports, "for professional services rendered the said infant by physicians and lawyers, and for my bond as general guardian, all paid by me, have been upward of \$8,000. "From an examination of the accounts of various merchants and others with whom I have dealt I find that there has been expended for clothing, supplies, toys, etc., for the use of said infant since the date of his birth to

JOHN JACOB ASTOR, JR.
December 31, 1914, and paid by me a sum upward of \$5,000. "I have not charged the infant with any portion of the rent paid by me for my summer home at Bar Harbor, Maine, or of the cost of various trips on which he has accompanied me; or of the cost of the upkeep of automobiles maintained by me, from all of which he has received substantial benefit, and with a reasonable portion of which expense, as I am advised by my counsel, Hon. Henry A. Gilder-sleeve, the said infant might properly be charged. "From this it would seem that the expenditures I have incurred for the benefit of my said infant are far in excess of the moneys received by me."

UNCLE SAM BAKES SOME GOOD BREAD

He Does Things by Rule in Big Model Bakery; Able to Dry Dishes Without Towels

Miss Hannah Wessling has probably baked more bread within the past few years than does the average mother of a large family in a long lifetime on the farm. Miss Wessling has both men and women assistants to help her, but she makes most of the bread herself, working the dough with her own hands.

This all takes place in the experimental bakery, which is a part of the United States Department of Agriculture. Here hundreds and thousands of tiny test loaves of bread have been baked, to say the least, of cakes and biscuits without number. The baking has been done under all sorts of conditions and with all grades of flour and all manner of leavening powders, banana flour, chestnut flour, and other varieties which it has been suggested might possibly be produced more cheaply than a wheat flour in certain localities.

They Do Things by Rule
The men and women who have studied bread-making for the government would like to see all bread made by rule of thumb. Perhaps some women will regard them as a trifle fussy when they object to the way the usual housewife trusts to her judgment in taking a pinch of this and a dash of that instead of weighing and measuring everything from flour to flavoring that enters into the making of bread or pastry, but their ideas are worth listening to all the same.

Another suggestion they make is that most cooks would have better success if they gave greater attention to the water temperature. Fermentation, say these wisecracks, is the foundation of successful baking. Miss Wessling has invented a closet where the heat can be controlled accurately and absolutely. This sponge closet is heated by electricity and fitted with glass doors through which the progress of the operation may be watched. Miss Wessling declares that any housewife may obtain the same beneficial results by boring holes in the top of an ordinary wooden box, fitting a shelf for crockery and installing underneath a small oil lamp to provide heat.

Miss Wessling and her assistants prepare their own flour, except of course when tests are being made of commercial flours such as are sold in the open market. When wheat is sent to the Department, as is constantly the case, in order that its flour-making qualifications may be determined the sample is made into flour under Miss Wessling's direction in a room fitted with several types of the small hand-power mills such as may be found in many farm houses.

This experimental bakery is also a model kitchen, and will interest any housewife from this standpoint. To be sure, all the baking is done in gas or electric ovens, but this is merely because the experimenters must know the exact temperature at all times and be able to regulate it to the fraction of a degree. Otherwise there is nothing in this bread-making that may not be duplicated in the every-day kitchen.

The experience at the Department of Agriculture is that a heat of about 400 degrees is best for making bread. In baking, and there is no reason why this cannot be attained with a wood-burning or coal-burning range just as readily, though perhaps not as quickly, as with an electric or gas oven.

Drying Dishes Without Dish Towels
Several original ideas have been worked out in the equipment of this unique bakery kitchen, and one of them would be useful to any housewife as a means of saving space, time and steps. This is a drain board or dish rack, and is placed flat against the wall directly above the kitchen sink. This flat board, several times as large as the ordinary break board, is full of holes in which may be stuck at will pegs or sticks which, when in place, project from the face of the board at an angle. The purpose of these pegs is to furnish support for all manner of dishes and cooking utensils. The cups, the tumblers, the pitchers, and other deep vessels may be placed bottom up, each on its individual peg, whereas plates, saucers and flat dishes are supported in perfect security on rows of more slender sticks—each about as large around as a lead pencil—set close together so as to form what is equivalent to a continuous rack.

The advantage of this device is that it does away with the drying of dishes in the ordinary time-consuming way, and also saves the wear and tear upon dish towels and the time spent in laundering them. The dishes and utensils after being washed are rinsed in boiling water, and suspended on the upright board down which the surplus water quickly drains. Evaporation performs its work in short order, and they are ready and waiting in the most convenient place when the time comes for another baking or the preparation of the next meal. Waldon Fawcett in Farm and Fireside.

Enrollment of Every Able-bodied Man Urged

By Associated Press
New York, June 15.—An executive session of the delegates to the Peace and Preparation Conference was called for this afternoon when it was expected that recommendations would be submitted.

The purpose of the conference, which should be taken for adequate defense and, if necessary to urge upon the President of the United States the need of calling a special session of Congress.

A DREAM CARTOON

The following letter from San Jose, Cal., was received by the editor of Cartoons Magazine: "The writer is a dreamer alright, alright, and my dreams suggest numerous cartoons. For example, I dreamed the other night that I was standing on a steep hillside facing a stream of blood which made the angels weep and on a hill above the rill in even plain view I saw the form of Kaiser Bill and he was looking too. His face was blanched, his eyes bloodshot. His bosom heaved a sigh, as he stood on the mountain top, a tear stood in each eye. Mine, Got, what have I done, he cried, as he gazed on the stream of blood. I was charged to my pride, or is this just a dream. Later he fell face downward into the stream of blood."

PRESIDENT INAUGURATED

Washington, Pa., June 15.—Dr. Frederick W. Hinitz was inaugurated president of Washington and Jefferson College here to-day. Some of the leading educators in the United States attended the ceremonies. Dr. Hinitz was formerly president of Center College, Danville, Kentucky.

City Health Officer Raunick Says

"PASTEURIZED MILK IS THE ONLY SAFE MILK TO USE"

Dr. J. M. J. Raunick advises this precaution to guard against the present outbreak of typhoid fever in the city.

There is only one perfect way of pasteurization. We employ only the most scientific methods and our modern facilities are operated by scientific men whose experience and careful attention is a guarantee of the highest possible standard confirmed by the report of the health department.

Buy Pennsylvania Milk Products Co., Milk and Cream

This cap on every bottle is your policy of milk insurance. All herds are carefully inspected by our veterinarian and after proper pasteurization the milk is delivered to you under the most sanitary conditions possible in all parts of the city by our own wagons.

LASSEN VOLCANO IS UNDER OBSERVATION

Dangerous Peak's Activity Forms Basis For Scientific Study by Geological Survey

Washington, D. C., June 15.—Mt. Lassen, California, whose violent eruption of May 19 places it in the first rank of volcanoes now dangerously active, has become the subject of an informal co-operative study by the geological survey and the forest service. At the request of the survey, a telegram has been sent from Washington instructing the officers of the Lassen national forest, in which the peak stands, to continue observations of the volcano's activity and keep a record to be used as a basis for a scientific investigation by J. S. Diller, a government geologist, who is expected at Lassen early in July.

The observations are being made by forest rangers at the scene and from a fire lookout tower on Brokeoff Mountain, a few miles north of the crater where the forest service last year kept watch on the numerous eruptions which occurred from May to September.

Cloudburst Started It
It is not known whether a cloudburst started the last eruption by precipitating rain down upon the molten lava in the crater, or whether melting of the snow on the peak, with consequent flowing of water into the crater, caused the accumulation of steam which blew a river of mud out of the mountain. Mr. Diller, who made a study of the volcano last year, said that he inclined toward the melted snow theory, adding that the bright glow reported as appearing on the clouds of smoke and steam over the crater is a reflection of the red-hot matter uncovered by the eruption, indicating that the volcano is in a more or less dangerous mood.

The river of mud which was shot out of the north side of the crater and down Hat Creek has damaged government and private property, says a wire to the forest service from San Francisco, destroying bridges which were necessary to permit the entrance of livestock that are grazed on the forest range during the summer. Some 12,000 cattle and 30,000 sheep are grazed on the Lassen forest every year.

Mt. Lassen is regarded as exceptionally interesting from a scientific viewpoint, according to the geological survey, inasmuch as it is the only active volcano in the United States proper, is very accessible to observers, and appears to be full of dangerous possibilities. There is much that is not known about volcanoes, and Lassen is expected by geologists to furnish a considerable addition to existing information on the subject.

SELECTING THE TROUT HOOK

Many anglers advise a small hook for big fish on the theory that the bend is better filled and more firmly imbedded.

And it is an equally plausible theory that big files attract big fish. The trout see them better, especially after their eyesight has been dimmed by months of living in deep, dark water. When a light, leisurely fly is floating down toward the water, the smaller trout near the surface are watching for it like a fullback for a punted ball. A big hook attracts the big fish in deeper water and the small fry scatter. In fact, the fighting qualities of trout are often magnified by light rods and fine-spun tackle.—Outing.

GOOD ROADS DAY IN MISSOURI

Kansas City, Mo., June 15.—Thousands of volunteer workers are busy on the highway of Western Missouri

to-day in response to the call of Governor Major, who set to-day and tomorrow as Missouri good road day, and are planning for the official observance of the days later.

A National Custom

"Bull" Durham is more than a national form of enjoyment—it is an expression of American character. The millions of "Bull" Durham smokers are the self-reliant, energetic Americans who make the United States the most progressive nation in the world.

These men make their own opportunities, make their own success—and they make their own cigarettes, to their own liking, from ripe, mellow

GENUINE "BULL" DURHAM SMOKING TOBACCO

It is smart, fashionable, correct, upon all occasions, to "roll your own" cigarettes with "Bull" Durham tobacco—and shows an experienced smoke-taste.

The smooth, mellow flavor and rich fragrance of fresh-rolled "Bull" Durham cigarettes afford healthful enjoyment and lasting satisfaction to more millions of men than all other high-grade smoking tobaccos combined.

FREE An Illustrated Booklet, showing correct way to "Roll Your Own" Cigarettes, and a package of cigarette papers, will both be mailed, free, to any address in United States on postal request. Address "Bull" Durham, Durham, N. C.

Ask for FREE Package of "Papers" with each 5c sack.
