TIRED ALL THE TIME

It is good to feel tired sometimes, when you have exercised sufficiently to cause a healthful feeling of fatigue. But, you should be refreshed by rest. A tired feeling that does not disappear even after a night's sleep is abnormal. It means that you are anemic or debilitated, that you need a tonic to build you up and fortify your system against such a condition.

Thin blood is largely the sufferer's own fault. It results from neglect, because the blood can be built up. Dr. Williams' Pink Pills supply the elements that the blood needs to make it rich and red and enable it to carry more oxygen. Building up the red portion of the blood is simple but because thin blood does not call attention to itself is often neglected. Have you seriously considered taking a course of treatment with these blood-making pills? If you are in doubt write for information.
