LAWS OF NUTRITION REVEALED IN HOGS IMPORTANT TO HUMANS

CHAPTER 54. There is a remarkable similarity between the pale watery tissues of the hog, including the diseases to which such devitalized tissues offer little or no resistance, and the pasty complexion and anaemia of the human being—feeding for fat produces a modification in the composition of the flesh which destroys immunity.

Before reviewing the most startling poison squad experiment ever conducted, either in the name of science or as the result of accident, it will be well for us to emphasize the significance of the Madiera-Mannore tragedy and the lesson learned as the result of the Elizabeth county fall episode by checking up on the laws of nutrition as they are revealed in the feeding of sheep and hogs.

Figures provided by the United States Bureau of Animal Industry show that less than three one-hundredths of 1 per cent of all the sheep killed in one of the inspected slaughterhouses during a period of twelve months ended Nov. 1, 1913, had to be condemned on account of disease; whereas in another establishment of the same kind one-sixth of all the hogs slaughtered during the same twelve months had to be condemned.

This means that for every one sheep found to be diseased 228 hogs were found to be similarly affected. This vast difference, startling in its suggestiveness, between the sheep and the hog, in regard to their respective resistance to disease, is entirely due to the difference between the methods whereby they are fed.

There are hundreds of astonishing examples of the manner in which the condition of an animal's tissue tone and general health are affected by its food.

BUREAU OF ANIMAL INDUSTRY BULLETIN 25, ISSUED DECEMBER 16, 1913, REPORTS ON THE FACT THAT CATTLE FATTENED ON THE ARTIFICIAL DIET OF COTTONSEED CAKE AND FEET PULP, NOTWITHSTANDING THE PRESENCE OF SLIPS IN THEIR FOOD, LOST BY SHRINKAGE WHILE STILL ALIVE MORE THAN TWICE AS MUCH WEIGHT AS CATTLE FED ON THE NATURAL DIET OF GRASSES AND THE

SIMPLE APPLICATION THAT DISSOLVES BLACKHEADS

No more squeezing and pinching to get rid of those unsightly blemishes, blackheads. There is one simple, safe and sure way to get them out and that is to dissolve them. To do this just get about two ounces of powdered norexin from your druggist—rub a little on a hot, wet sponge—rub briskly over the blackheads for a few seconds—wash the parts and every blackhead will be gone.

SAGE TEA TURNS GRAY HAIR DARK

It's Grandmother's Recipe to Bring Back Color and Lustre to Hair.

That beautiful, even shade of dark, glossy hair can only be had by brewing a mixture of Sage Tea and Sulphur. Your hair is your charm. It makes or mars the face. When it fades, turns gray or streaked, just an application of two of Sage and Sulphur enhances its appearance a hundredfold.

Don't bother to prepare the mixture; you can get this famous old recipe improved by the addition of other ingredients for 50 cents a large bottle, all ready for use. It is called Wyle's Sage and Sulphur Compound. This can always be depended upon to bring back the natural color and lustre of your hair.

Everybody uses "Wyle's" Sage and Sulphur Compound now because it darkens so naturally and evenly that nobody can tell it has been applied. You simply dampen a sponge or soft brush with it and draw this through the hair, taking one small strand at a time; by morning the gray hair has disappeared, and after another application it becomes beautifully dark and appears glossy and lustrous. This ready-to-use preparation is a delightful toilet requisite for those who desire dark hair and a youthful appearance. It is not intended for the cure, mitigation or prevention of disease.—Advertisement.

FRECKLE-FACE

Sun and Wind Bring Out Ugly Spots. How to Remove Easily.

Here's a chance, Miss Freckle-face, to try a remedy for freckles with the guarantee of a reliable dealer that it will not cost you a penny unless it removes the freckles; while if it does give you a clear complexion the expense is trifling.

Simply get an ounce of othine—double strength—from any druggist and a few applications should show you how easy it is to rid yourself of the homely freckles and get a beautiful complexion. Rarely is more than one ounce needed for the worst case.

Be sure to ask the druggist for the double strength othine, as this is the prescription sold under guarantee of money back if it fails to remove freckles.

seeds of grasses during transit from point of origin to destination.

September, 1900, Dr. Oscar Liebreich of the Imperial Board of Health, Berlin (Geheimer Medizinalrat, Ordentlich Professor der Heilmittellehre und Direktor des Pharmakologischen Instituts des Koniglichen Universitat Berlin) made the following report on the use of coloring matter by sausage makers:

"It is now some years ago that a century since the coloring of pale-colored sausage was introduced. Many farmers and cattle breeders have now adopted the method which enables them to enhance the weight of their cattle and hogs, instead of feeding, as usual, to the deep, with nutritious substances with bran, potatoes, skim milk, etc., the animals now get all sorts of so-called strengthening feeds: Farm-house refuse (garbage, garbage, by-products of breweries, cottonseed meal, exhausted pulp) and the like.

"This method of fattening produces a considerable modification in the composition of the flesh. While under the old system of feeding, animals with solid, substantial, muscular flesh, rich in coloring substances, were produced, the flesh formed by present artificial means is very fat, contains a great deal of water, and is very poor in coloring substance.

"The old system of feeding produced the fleshy pork; the new system produces fat pork.

"While formerly sausages were of a good red color, they are now always pale. Hence the dye must be employed when the hogs are slaughtered. The character of modern pork to be disguised to resemble what it should be."

"Here we have the rapid shrinking of the watery tissues of the artificially fed cattle and the anaemic flesh of artificially fed hogs to teach us the dangers of refined food in the production of enfeebled vitality and disease.

"The sheep still feeds itself as it has fed for thousands of years. It follows nature's instinct. It knows nothing of the artificial byproducts upon which dairy cows and hogs are reared. In consequence it resists nearly all diseases and maintains such a state of normal health, as we have seen, that less than three one-hundredths of 1 per cent of all the sheep killed in several inspected abattoirs are found to have anything the matter with them.

In 1913 Dr. M. B. Ravenel, professor of bacteriology of the University of Wisconsin, made an examination of conditions in the slaughter houses of Wisconsin and other States. In addition to the many other diseases with which he found the hog to be cursed, he declared in his report:

"Twenty per cent. of the average lot of hogs brought to slaughter are tuberculous. These hogs do not develop the disease within themselves, but contract it by feeding on by-products of creameries and following tuberculous cows engaged in the production of milk."

Here we have a startling similarity between the pale, watery tissues of the hog, including the diseases to which such devitalized tissues offer little or no resistance, and the pale complexion, anaemia or hemoglobin deficiency of the human being.

Dr. Rolf Wilson is responsible for the following statement, published in the Medical Times, January, 1914: "R. L. Babcock, Chicago, reports that in city dwellers the hemoglobin above 90. I believe the prime reason for this," he says, "is the demineralization of the food now put upon the market."

SOME PROFITABLE HOBBIES

By Frederic J. Haskin

amazing price. Since then, the dogs have proved a permanent source of income.

While the best place to raise dogs is in the country, where they can have plenty of exercise and fresh air, dog breeding is conducted in many private homes in cities. In New York there are numerous houses whose basements shelter dogs that win blue ribbons in the shows. The majority of the animals thus raised are of the smaller breeds known to the industry as "toy dogs," including terriers, spaniels, poodles, Chinese crested dogs, Mexican hairless dogs and the Pomeranian lap dog. They bring excellent prices, ranging all the way from ten to a thousand dollars each.

Most amateur breeders begin with low-priced dogs and gradually improve the stock in proportion to the size of their profits. On the other hand, some never handle pedigreed stock at all, but derive fair incomes from the sale of good ordinary stock, at five to twenty dollars an animal. It does not take long, however, for the average breeder to develop an enthusiasm for pedigreed dogs which he can exhibit.

The professional breeder, with a reputation to maintain, decides definitely what particular points he wants reproduced and then breeds all his dogs along the same lines. Any pup which fails to possess all of the necessary requirements is promptly disposed of. Sometimes it is just his tail which is a trifle too long, and at other times his ears, but that is enough to condemn him.

As a rule, dogs do not require a great deal of care other than the ordinary amount of food and cleanliness necessary to their health, but with some persons a hobby is a hobby and as sacred as religion. Thus the kennels of Barrington, Illinois, said to be the largest in the United States are small kindoms where every dog is a pampered monarch who rules his keepers by the mere wagging of a despotic tail. Here every full-grown dog has his own particular apartment, an elaborate affair with sliding doors, polished brass trimmings and a tablet giving his name, pedigree and the honors he has won. There is a porcelain trough for water and lace curtains are in the windows, together with an outside run on which the royal personage may take his daily constitutional.

Seventy pounds of the finest quality beef is bought daily for the consumption of these dogs, and is prepared in a model kitchen by a chef who specializes in canine dietetics. After each meal the royal china, washbasin and fresh drinking water is served four times a day.

There is a community bathhouse supplied with soaps, powders and disinfectants, white enameled bathtubs and linen marked with heavily-embroidered monogram of the kennels. Besides which, there is a dog hospital, and a puppy nursery where the small animals are kept until sold or ready for exhibition purposes.

Such are the kennels that have made Barrington famous, but there are few others like them, since the breeding of cats and dogs so far has been confined largely to amateurs.

Clothing on Credit

MEN—It's Distinctive!

The season's choicest styles in Spring suits are assembled at this store, each and every model embodies the individuality and correct good form that men have learned to expect in clothes they buy here.

VALUES ARE AS ATTRACTIVE AS THE STYLES
