POULTRY NEWS

Modern Methods and Big Business in Poultry Culture

Campines, both Silver and Golden, are now on the wave of popularity among American poultry breeders. The Golden Campine is of recent introduction, and probably less known than the Silver Campine, which enjoyed a short-lived "boom" in America about 18 or 20 years ago.

tries to the city is still under full drive—the experts tell us. The millions of mouths in New York, Philadelphia, Chicago and a thousand other centers of population must be fed, and no article of diet is more attractive or necessary than the product of the poultry yard.

The "Chicken Dinner" will never be surrendered so long as there is a supply forthcoming. However much of a luxury an egg is, it is at the same time a necessity. Where in the household will it cook without eggs? It would be interesting to make an exhibit of the endless ways in which the products of the poultry yards are used in the thoroughly down-to-date American kitchen.

Cold storage also, while it has wrought havoc at times in the markets, will more and more have a steady influence on the prices through the year. Looking at the matter from any possible point of view the prices and the markets for the poultryman's products appear practically certain to continue everything that is desirable.

It is a fowl of the Mediterranean type, small of bone and body, active and nervous and a heavy layer; great claims having been made for it in this direction. For markets demanding white eggs, Campines furnish eggs that command top prices.

RAISE CHESTY CHIX WITH CHICKEN CHOWDER. It contains ingredients necessary for properly maturing a chick, such as linseed meal, granulated meal, alfalfa flour, bran, etc., which are scientifically mixed and cost less than they would separately, even if available.

The United States Government Says—"Many brands of Portland Cement are on the market. Select some well-known make, guaranteed by the local dealer to meet the standard specifications for cement of the United States Government. The scientific tests of cement are too complicated and expensive for the small consumer."

ALPHA PORTLAND CEMENT. Both we and the manufacturers warrant every bag of ALPHA PORTLAND CEMENT to more than meet the United States Government standard for strength and every other recognized test.

When you have a House to Rent. Give it a coat of good paint before you tack a sign on it. It won't cost much and a well-painted house always rents more readily than a shabby one—rents for more money, too. DEVOE THE GUARANTEED LEAD AND ZINC PAINT FEWER GALLONS—WEARS LONGER.

It is just as essential to use good paint on a house you own and rent as on the one you live in. Therefore, paint with DEVOE and increase the value of your property. DEVOE always gives satisfaction because it is pure. It contains no whitening, silica, china clay or other adulterants. DEVOE takes fewer gallons and wears longer. Ask your dealer for a Devoe color card, or write us. F. W. DEVOE & C. T. RAYNOLDS CO. New York Buffalo New Orleans Houston Boston Savannah Pittsburgh Founded in New York in 1874. The oldest manufacturing concern in the United States.

Save Your Chicks Dr. HESS POULTRY PAN-A-CE-A Will Help Them Over the Danger Period. During the first six weeks is when your success is threatened with leg weakness, indigestion, diarrhoea and capes. I dare you to make this test. Feed one batch of Pan-A-Ce-A regularly as directed—the other not. The weeks of the Pan-A-Ce-A chick are not larger—healthier—better feathered. If you don't wish you had fed Pan-A-Ce-A, order your whole flock, 500 right back to my dealer and get your money. Dr. Hess. Only requires one cent's worth for thirty chicks each day. 1/3 lbs. 20c; 1 lb., 60c; 1 1/2 lbs., 90c. Dr. Hess Instant Loue Killer Will keep your brood free from lice. Comes in sifting-top cans. Guaranteed. 1-1/2 lb. can, 20c; 3-1/2 lb. can, 60c. DR. HESS & CLARK, Ashland, Ohio

DAUPHIN WILL LET STATE TEST DOG ACT IN COURTS. Following a conference yesterday with Dr. Joseph Kalbfus, State game commissioner, Dauphin county's board of commissioners intimated that they will probably let the State rule the county authorities into court in a test case to settle the dog tax problem.

MECHANICS TRUST COMPANY HARRISBURG, PA. CAPITAL & SURPLUS \$ 600,000.00

3 Per Cent & Safety. In our Savings Department we welcome deposits of \$1.00 or more, thus enabling you to accumulate a substantial surplus fund by saving small amounts. We pay you 3 per cent. interest, compounded every four months and afford the most complete protection as well as every convenience for depositors. Begin the New Year with a Savings Account. 3% Paid on Savings Accounts

There's a Difference in Coal. A vast difference. You may be burning more coal than is necessary, because you are not burning the kind especially adapted to your requirements. Talk the matter over with us—we'll steer you right on the particular kind of coal you ought to be using—and supply you with the best heat-giving fuel you can buy. Costs the same—and goes further. J. B. MONTGOMERY 600—either phone 3rd and Chestnut Streets

Stock Transfer Ledger. The Pennsylvania Stock Transfer Tax Law (Act of June 4, 1915) which is now in effect requires all corporations in the State, no matter how large they may be to keep a Stock Transfer Ledger. We are prepared to supply these Ledgers promptly at a very nominal price. The Telegraph Printing Co. Printing—Binding—Designing—Photo Engraving HARRISBURG, PA.

that the act in its present form is unconstitutional. NEW BUILDING FOR HAYNES. The Haynes Automobile Company is completing the fifth addition to its plant within the present fiscal year. The new structure that is being completed at the present time will house the production of the "Light Twelve" car. It is expected that the manufacture of the high power, light weight car will be under way by June 10.

Among the half a dozen prisoners who will plead guilty to various crimes in Dauphin county court Monday morning will be Charles Geesey who will answer to charges of assault and battery upon—his mother-in-law. Charles Sands, arrested in Baltimore, a fugitive since 1915, will plead guilty to two charges of larceny; James E. Colbert, Roger Polston and Daniel Gates, will answer to similar charges; George Radaewicz will be arraigned on a charge of assault and battery. Samuel Stimer for defrauding his boardinghouse keeper and James E. Blair will be sentenced for feloniously entering and robbing the Port Hunter hotel.

Lumber Yard conveniently located. Our lumber yard is located at Forster and Cowden streets—in the heart of the city. The expenses for hauling are therefore considerable lower than if we were located on the outskirts. This is easy to understand. Get our prices for your next lumber job—we can save you money. Samuel Stimer for defrauding his boardinghouse keeper and James E. Blair will be sentenced for feloniously entering and robbing the Port Hunter hotel.

Improved processes of incubation prove that the poultry industry is moving forward at an amazing pace in its methods of operation—like every other occupation—from making pins to carrying on a gigantic steel works. The difficulty of getting the eggs hatched in sufficient numbers has made large operations practically impossible until quite recently. The miracle-working machine has come to the front here as everywhere, and the work is made easy. By the use of modern incubating machines thousands of chicks can now be hatched at once where a few years ago only hundreds could be hatched. One company advertises machines with capacities from 1,200 to 30,000. The manipulation of them is exceedingly simple. Hot water heat is used. A little coal fire at one end of the long incubator heats the water for the hatching of the tens of thousands of eggs at one setting. In the process of hatching the eggs must be turned every day. The machinery has been so ingeniously adjusted that ten thousands of eggs can be turned in 30 seconds. Such a device saves an enormous amount of labor over the handturning method. One

Labor-Saving Systems Solve Problem of Profits With Hens on Large Scale

Hatching and Handling of Tens of Thousands of Birds Made Easy. By G. R. Smith. Author and Practical Poultryman. The small flock is profitable. Tens of millions of small flocks of hens all over the world are sufficient evidence that they are paying propositions. The question now is, CAN THE BIG FLOCK BE MADE PROPORTIONATELY PROFITABLE? The farmer's flock of fifty has ceased to be thought of as a necessary nuisance. It is recognized as one of the small but very reliable sources of income. Yet the average farmer is not fully convinced of the possibility of BIG BUSINESS with the LITTLE Hen. He is interested but skeptical. He is to be shown but is conservative. It is well to remember at this point that immense progress has been made in methods of poultry culture during the last few years. What was altogether impossible, even at the opening of the present century, has become easy of achievement now because of these improved systems.

man can in this way take care of the hatching of a vast number of chicks. Fifteen eggs are as many as a large hen could cover, even in warm weather. It is plain therefore, that a giant hatching machine with a capacity of 10,000, is equal to more than 650 hens all sitting at one time. This is one of the reasons why the poultry industry is taking such a stride in poultry culture, or even with general farming, as a possible source of large profits. On one poultry farm I saw an incubator cellar with a total output capacity of 48,000 baby chicks every three weeks.

Modern brooding on a big scale, therefore, is the second great step toward possibilities for big business in poultry culture. A third is: The Large Laying Flock. A quarter of a century ago the highest authorities allowed only fifteen fowls in a flock. The average floor space allotted to each laying hen was not less than 10 square feet. These conditions were insisted upon as essential. Steadily, however, as experiments proceeded, the flocks were enlarged, and the average floor space for each fowl was reduced. At the present time laying hens are kept in flocks of from 100 to 1,500. On the largest poultry farms where the aim is mostly for the production of market eggs, the number usually runs from 250 to 500 in each laying pen. This large flock principle has been found to work well in the hands of skilled poultrymen. The danger from disease is much greater where many birds are massed together. But the man who knows the vital importance of cleanliness, fresh air, and the right kind of balanced ration every day in the year, will not be running great risks. The labor-saving factor here is immense. For example, I visited one big plant where 500 layers were kept in each laying house. One man was attending to the feeding of seven of these flocks, or a total of 3,500 fowls. Had they been divided into pens of 15 fowls each, according to the old method, he would have had 233 pens to visit at each feeding.

Thus it may be seen that the wages of a fowling man are saved by the discovery of the large laying flock principle. Besides, the space required for each fowl on the average is not more than one-third of what would be required under the old system of from 12 to 15 hens in a pen. It is true, a smaller percentage of eggs will be produced under the extensive method of operation than by the intensive system. But the loss sustained in this way will be small in comparison with the gain in the saving of labor and space.

Markets and High Prices. The great cities are constantly increasing their population. The large towns are rapidly growing into cities. The consumer is multiplying in the land much more rapidly than the producer. The rush from the rural dis-
