Don't Forget the Idea

that all refrigerators are not alike. There is all the difference in the world in refrigerators. Some are made for a price. They are nothing more than one box inside of another with an ice rack and shelves. This side icer is an example of what a firstclass refrigerator should be. It is made of selected wood insulated with mineral wool packing which is a non-conductor of heat. It has a highly polished surface that would do credit to any piece of furniture. The doors are all paneled. The patent waste trap allows water to drain off quickly without the air penetrating the ice chamber and is so constructed that it can be easily removed. As long as there is a pound of ice in the ice chamber you can feel assured that a perfect circulation of dry, cold air is being maintained.
It is built on the most scientific principles of re-frigeration. Very simple to fill and as easy to clean
