IN MEXICO 70 YEARS AGO

[Continued from Editorial Page] us our glorious flag waving in the breeze, and planted on the forts and palaces of the Mexican capital."

strong. Immediately in front of Scott was the fortified village of San Antonio to the left of which was the hill Contreras bristling with 61 pieces of artillery. After some desultory fighting on August 19, the assault upon Contreras was made at 3 o'clock on the morning of the 20th, attacks being delivered simultaneously both front and rear.

enemy was driven headlong from his trenches in an incredibly short space of time. In this engagement 4,500 Americans drove 7,000 Mexicans from their strongholds and pursued them with immense slaughter. The results of the battle were gigantic, seven hundred of the Mexicans being killed and eight hundred taken prisoners. The Americans also captured twenty-two pieces of artillery and an immense store of arms and ammunition. All this was effected at a loss of but 60 men killed and wounded.

Mexican authorities could not agree on the boundary line of Texas. The Mexicans were just as determined in that latter as when Texas first established its independence. Could they have brought themselves to accept the line of the Rio Grande, they probably might have saved some 600,000 square miles of Mexican territory which they were compelled to relinquish a little later.

RUSH TO FIGHT UNDER COLONEL

Hundreds Apply For Places in Roosevelt's Military Division New York, June 29.—Hundreds of messages, by telegraph and some by telephone, greeted Colonel Roosevelt when he motored into the city from Oyster Bay yesterday. The messages almost without exception contained requests to be allowed to join the division of troops which it is reported, and not denied, that the Colonel is going to offer the government for service in Mexico. These requests came from men of all ages and in nearly every walk of life. Doctors, lawyers, ex-regular and guard officers, ex-private soldiers, men who have had the greatest amount of experience and those who cheerfully admitted that they had not, all were eager to join the rush of recruits in the four T. R. brigades.

Military Men Approve

It was said by military men that there was nothing to prevent the organization of such a division as contemplated by Roosevelt, so far as the technique of a military organization was concerned. His idea to have two brigades of cavalry, in itself a division, attached to a brigade of infantry and a brigade of field artillery, will make his division what is known as a reinforced division. It was said that there would probably be no more than 20,000 men in such an outfit than 12,000. A rough estimate of the units in the organization would be as follows, it was stated: 5,500 infantry, 5,000 cavalry, 5,000 artillery and approximately 5,000 more in the complementary forces such as the aeroplane squadron, the signal corps detachment, the engineer battalions, the hospital corps and the headquarters troops.

Should War Break Out, These Men Will be the Nucleus for Mobilization of the Division.

The Colonel will do nothing more on the organization until there is a call for volunteers. It is believed there will be no hindrance placed in Roosevelt's way to prevent his going to Mexico or anywhere else that will take him from the political campaign now starting. It was asserted that it would take a special act of Congress to have the Colonel appointed a major-general, no matter how many men he could offer the government. The Colonel himself is silent on all topics, including war and politics. While he was in the Hotel Langdon the sound of cheering was borne to his room and he hurried to the window to see the Twelfth Infantry, New York National Guard swinging by. His big jaw set in hard lines and there came a gleam in his eyes as he watched the men in brown tramping on toward Mexico.

DRUGLESS HEALING

Tells How Nerve Insulation Quickly Stops All Pain And Allays The Inflammation. Even Rheumatism, Sciatica And Neuritis Yield to Marvelous New Discovery

The nerves of your body are like electric wires. They carry the nerve energy (neuro-electricity) which is generated in the brain, to all the cells and tissues. The nerve sheaths are insulated to resist a current of about 4/1000 of a volt as has been proven with the aid of Lord Kelvin's galvanometer, an instrument so sensitive and accurate that for the first time it is now possible to measure the strength of nerve currents.

treat inflammatory disease is to quickly repair the damaged insulation and enable nature to restore the diseased tissue to a healthy condition. Ion-o-lex Unguent does this. Ion-o-lex Unguent is not a drug. It does not contain opiates or narcotics. Its action is entirely mechanical. Applied externally, it penetrates the tissues and surrounds the injured nerve sheaths with an insulating bath. Then the inflammation subsides and nature quickly repairs the nerve lesion—you are well. Don't suffer another minute, just go to H. C. Kennedy and get a large jar of Ion-o-lex Unguent, it costs little, use as directed and if you cannot say that it is the greatest means ever devised for conquering inflammation wherever it exists, your money will be cheerfully returned without a question.

HOW MINES ARE LAID AND FREED

One of the ways in which the belligerent nations lay mines in harbors and other waters is described in the July Popular Mechanics Magazine. On one deck of a vessel are several narrow tracks supporting the mines, each of which is mounted on wheels. Each mine is in turn rolled to the stern, and by means of special launching tracks, is dropped into the sea without tilting. A mine of the character described is made up of three parts: a spherical floating chamber containing the explosive, etc., an anchor chamber which is connected with the former by a cable, and a weighted sounding line. The length of the latter is equal to the depth at which the mine is to float. When the end of the sounding line strikes bottom the lessening of its pull throws a pawl which prevents the drum in the anchor chamber from paying out more cable to the sphere. Consistently later a draw under water to a depth equal to the length of the sounding line, as the anchor chamber settles to the bottom, a A part of the mine is drawn under water to a depth equal to the length of the sounding line, as the anchor chamber settles to the bottom, a

CLOCK PLAYS RECORDS

A phonograph clock which plays one or more selections on a phonographic attachment at any designated hour, or hours, has been constructed by an Illinois jeweler. The July Popular Mechanics Magazine describes the mechanism of the apparatus, which is operated by a spring motor; the records, if desired, can be played independently of the clock, or the back of the timepiece, attached to the center pinion, working in unison with the minute hand, is a series of four switches which are so set that a different record will be played every 15, 30 or 60 minutes; or the clock can be set to play only once in 12 hours. When a large photograph is used the whole mechanism stands about as high as a hall clock.

TO TAKE OFF FLESH AND REDUCE WEIGHT

Eat Plenty of Wholesome Food, But Breathe Deeply and Try a Little Oil of Korein With Meals. Some people seem to be able to eat whatever they please without its increasing their weight to any degree, while on the other hand other folks, inclined to stoutness, try to eat lightly of the so-called fleshmaking foods but keep gaining weight all the time. Such a condition is both unnatural and dangerous but can often be quickly overcome by practicing deep breathing in the open air. The blood of the average over-stuffed person seemingly fails to accept enough oxygen to consume the excessive fatty material in the food. But frequent open air deep breathing forces additional oxygen into the system, largely overcoming this defect and preventing further increase in weight. Then if this deep breathing plan is accompanied by the use of a little oil of korein, taking a few drops in a capsule with each meal and again before going to bed, it becomes possible to greatly reduce the weight even in a very few days. The best feature of this reducing method is that it is absolutely safe and

MORE MEN THAN WOMEN HAVE APPENDICITIS

Surgeons state men are slightly more subject to appendicitis than women. Harrisburg people should know that a few doses of simple Buckthorn bark, glycerine, etc., as mixed in Adler-I-ka, often relieve or prevent appendicitis. This mixture removes such surprising foul matter that ONE SPOONFUL relieves almost ANY CASE constipation, sour stomach or gas. THE INSTANT, easy action of Adler-I-ka is surprising. H. C. Kennedy, Druggist, 321 Market Street.
