TIME TO GET PULLETS COVERED

Department of Agriculture Warns All Chickens Should Be Housed

The State Department of Agriculture is sending out a State-wide warning to poultry keepers that it is high time to get the pullets under cover at night and urging that all poultry, young or old, should be housed. Cold November rains, hail and sleet and some snow are due and young poultry, particularly, sleeping in the trees at night during such weather are apt to develop the so-called one eye cold, and the sore head or chicken-pox, two diseases that have been scourging the State the last few winters.

A bulletin just issued says: "Cold roosting quarters, or unprotected roosting quarters are the biggest reason why the bottom drops out of the egg yield at this season. Provide a good house, but not a glass front, closed up tight one, withhold all feed for twenty-four to thirty-six hours then feed in the house and when the poultry is all in shut the door. This beats losing your temper, ruffling your Christianity and the feeling of your poultry both and saves a lot of fussing. Two weeks' confinement should be sufficient to wean all to the house."

"Well, that's very simple! And I know barley foods are the most digestible because the doctor prescribed them for my little boy when he couldn't eat anything else."

"How interesting! If it's a favorite with athletes it must be nourishing. Send me a package of
