Careful Seasoning of Lumber For Good Autos

A lumber yard in connection with a modern manufacturing plant for constructing and assembling the mechanisms of motor cars would impress the man on the street" as out of place. But this apparent inconsistency is a logical development at the plant of the Pranklin Automobile Company, Syracuse, N. Y., for the reason that the chassis frames of Franklin cars are made of white ash rather than steel. Franklin engineers choose ash for the same reason that the carpenter selects wood in making a handle for his hammer—because of the ability of the to absorb vibration. The easy-riding, resilient qualities of the Franklin car are largely credited to this shock-absorbing ability.

# Opened Last Evening

resilient qualities of the Franklin car are largely credited to this shock-absorbing ability.

The buying of the white ash for such use is a real problem. Close, straight grain, even texture, freedom from knots or other imperfections and extreme toughness are the qualities necessary and these are only found in second-growth white ash native to Northern Pennsylvania, New York and some of the New Bengland States. The fact that New York State alone uses about seventeen million feet a year, a freight train one mile and a half long would be about one mile and a half long would be recessary to move this lumber to Syrature of the Franklin Company is using about two million feet a year. A freight train one mile and a half long would be recessary to move this lumber to Syrature of the Franklin Company is using about two million feet as year. A freight train one mile and a half long would be necessary to move this lumber to Syrature of the Franklin Company, Only the very best parts of the best stocks of the Franklin Company, Only the very best parts of the best stocks of the Franklin Company, Only the very best parts of the best stocks of into these frames and as a result probably not over 30 per cent. of a log will cut up into suitable grades. Seasoning brings out imperfections which on these frames and as a result probably not over 30 per cent. of a log will cut up into suitable grades. Seasoning brings out imperfections which on these frames and as a result probably not over 30 per cent. of a log will cut up into suitable grades. Seasoning brings out imperfections which on these frames and as a result probably not over 30 per cent. of a log will cut up into suitable grades. Seasoning brings out imperfections which on the freshly cut lumber and thus only about one-quarter of a white ash log will eventually find its way into the freshly cut lumber and thus only about one-quarter of a contract of the process of transforming the lumber and thus only about one-quarter of a white ash log will expert the automobile shows may

**Belgians From Antwerp** Will Be Given Option of Returning to Their Homes

HARRISBURG, PA. The Peerless Motor Car Co.

Cleveland, Ohio

Men who observe the tendencies in motorcar design are beginning to comment on a fact brought out strongly at the New York show — increasing of style.

For many years, the entire life of the automobile industry in fact, the public has demanded and the manuracturers have built ears with longer and longer was considered essential to easy riding.

A paper delivered before the S. A. E. recently shows how the research of automobile engineers is bringing to light. Three factors are primarily responsible for riding quality; the unsprung weight, or the weight to those parts below the springs, as wheels and axies; the spring weight, or the weight to those parts below the springs, as wheels and axies; the spring weight, or the weight of the pounds pressure exerted per inch of deflection, which determines the flexibility. In general, the less the weight of those parts below the springs in comparison with the weight of those parts above, less the weight of the springs are comparison with the weight of those parts above, less the weight of the springs are more flexible the springs are more flexible the springs are selected to make a car cassivation of sprung weight to unsprung weight was unwittingly increased, A certain manufacture of the working of the parts and thus keep total was a manufacture of the parts and thus keep total weight of the car is increased and operating osci correspondingly goes up, parts is much faster. The

and Temples

A headache remedy without the dangers of "headache medicine." Relieves headache and that miserable feeling from colds or congestion. And it acts at once! Musterole is a clean, white ointment, made with oil of mustard. Better than a mustard plaster and does not blister. Used only externally, and in no way can affect stomach and heart, as some internal medicines do.

Excellent for sore throat, bronchitis, croup, stiff neck, asthma, neuralgia, congestion, pleurisy, rheumatism, lumbago, all pains and aches of the back or joints, sprains, sore muscles, bruises, chilblains, frosted feet, colds of the chest (it often preyents pneumonia). making a car easier to handle and safer.

The staff of engineers at the Frank-lin Automobile plant at Syracuse, N. Y., has been working on this problem for some years. Their Series 8 touring model weighed a little less than 2700 pounds, with unsprung parts lighter than the average. The Series 9 touring model has a total weight of 2280 pounds, about 15 per cent, less than the series 8 car, and the weight of the axles has been reduced 25 to 30 per cent. The riding qualities of the Franklin are due to the light unsprung weight and resilient construction.
