DREADFUL HAPPENINGS ON FAMOUS "RIDGE OF DEATH"

MYSTERY AND HORROR MARK BEAUTIFUL SECTION OF COUNTRY

Murders, Suicides and Accidents Have Been Occurring at Irregular Intervals For Many Years in Lancaster County Near Mount Joy

Mount Joy, Pa., April 14.—The most recent of a long list of fatalities which occurred near the "Ridge of Death," was that of Harry H. Kline, who was horribly mangled near his above at the argument of the humble cabins of that period. Kinsley returned home one of the humble cabins of that period. Kinsley returned home one as ago, Thomas McShone met his death by being badly mangled by a train a short distance west of Florin. The week before Mrs. Edward Bosser was instantly killed by a runaway horse, while going to church at Elizabettown. A few months before that Martin Same place where McShone was killed. That fearful "Ridge of Death," as it is generally called, is in Lancaster county, in the midst of a beautiful and peaceful community, a stretch of ground which seems to harbor an influence so malign and fiendishly bloody and cruel that only an endless was discovered dead at the end of its owner. May have been been learned.

A few months later Johannes Fissel was discovered dead at the end of a swift running passenger train near the same place where McShone was killed. That fearful "Ridge of Death," as it is generally called, is in Lancaster county, in the midst of a beautiful and peaceful community, a stretch of ground which seems to harbor an influence so malign and fiendishly bloody and cruel that only an endless was discovered dead at the end of a sway horse.

The next year Frederic Kiser methis fate there at the hands of highway men who robbed and murdered him and his body was found by a party of woodmen.

In appalling succession there followed a chain of fatalities. Henry Ireby, in descending a hill on horse-back at the western terminus, was thrown from his mount. He fell on his head and broke his neek. His body was buried by the roadside.

A little later, scarcely twenty yards from the spot wrere Irely fell, the

Some poultry raisers claim that an incubator can be operated anywhere—in the barn, attic, cellar, loft, shed, springhouse, in the kitchen, parlor or in a tent. Be that as it may, authorities agree that the best location is where the atmosphere is more

will not receive the oxygen which they absolutely require.

Remembered on Birthday Halifax, Pa., April 14.-Mrs. James Eby, who has been an invalid for the past five years, celebrated her 49th

birthday anniversary at her home in Market street on Tuesday. A large number of friends remembered her with beautiful post cards,—Mrs. Oliver Cooper, who underwent a seriou operation at the Harrisburg Hospital several weeks ago, has returned to her home in Armstrong street much

Games and music were enjoyed, after which refreshments were servd to: Mrs. J. E. B. Rice, Mrs. H. W. Neidig, Mrs. F. D. Luse, Mrs. George W. G. Smith, Mrs. Weigel, Mrs. Boyd, Mrs. Catharine Bowels, Mrs. H. R. Killheffer, Rev. J. E. B. Rice, Miss Julia Boyd and Mrs. B. W. Rowland.

Since the advent of the incubator a branch of the poultry industry has evolved, which was never even dreamed of by the most visionary, and which has exceeded the most sanguine expectations—the day-old chick business. There will be an interesting article on this subject for next week.

will not receive the oxygen which they absolutely require.

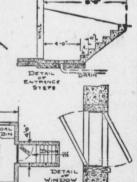

The above-mentioned conditions are seldom found in buildings above ground, especially in frame structures, hence the custom of running incubators in cellars and basements, and the popularly accepted idea that they must be run in such places. Where only a few machines are used they are usually operated in the cellar of the poultryman's dwelling, which is a good idea, except that it is advisable to partition of a tight room for the machines, so that the heat from a furnace, if there is one, or drafts from windows or doors will not affect the hatches. Where the incubator equipment is extensive, particularly where mammoth machines are used, best results are secured when the apparatus is housed in a cellar specially built for the purpose.

It is often desirable to hatch in the late spring and even in the summer months, but if the incubator is run in a house above ground, which is quickly heated by the sun's rays, it is difficult, almost impossible for the operator to keep the temperature of the egg chambers low enough. Because the temperature of most structures above ground varies widely every twenty-four hours, and because it is virtually out of the question to maintain moisture in such places except by radically artificial means, operating incubators under these circumstances necessitates constant resulation and watching.

Essentials of a Good Cellar

The ideal cellar or structure in which to run a machine is built about two-thirds below the ground level, which affords a fairly uniform, cool temperature, and one-third above the ground, which permits of adequate ventilation. In selecting a site, the first thing to consider is drainage, and on this account a hillside or high, dry CHICK! Conkeys S Buttermilk STARTING FOOD They like the buttermilk taste and the buttermilk taste and the buttermilk is good for them.
