Harrisburg Branch Given Big Allotment of Materials to Be Used in France

The Harrisburg Branch of the Red Cross society has been notified that it has been given an allotment of 6,500 each of sweaters, mufilers, pairs of wristlets and pairs of socks to be furnished as soon as possible as part of the big amount of supplies to be sent to France at once.

A cabled appeal for immediate shipment of an enormous amount of supplies reached the American Red Cross from Major Grayson M. P. Murphy to-day. The cable follows:
"Begin shipping at once one and a half million each knitted mufflers, sweaters, socks and wristlets. These are desperately needed before cold weather. In view of the shortage of truel and other discomforts they will be of incredible value in both millitary and civilian work.

Your first experience of military drill will probably consist of "setting-up exercises," which ordinarily occupy the first few minutes of the day. They consist of certain movements of the head, arms, trunk and legs which are carefully designed not merely to develop your muscles but also to increase your skill, grace, self-control and self-reliance. day for the soldier and sends him to his blankets a tired and sleepy man."

This is only a sample of a day in camp. On some days your company will go off on "hikes." After a time there may be longer marches, when you will carry your shelter tents with you and will make your own camp each evening. These are days that will be especially interesting. You will learn the soldier's art of adapting yourself to new situations and making yourself comfortable.

Your officers will ask you to do nothing that they have not many times done themselves. They will ask nothing of you which any normal, healthy man cannot do. After a month or two of this training you will find that you have begun to take on some of the skill and the self-reliance of a real soldier.

Red Cross to Spend Big Sum to Fight Malaria

The War Council of the American Red Cross has appropriated \$10,000 to free the Columbia, S. C., cantonment and its immediate vicinity from malaria.

The plan of the campaign includes draining off the stagnant water, regrading the creeks to keep the water in motion through an unobstructed channel, oiling the streams and pools of the vicinity at frequent intervals, and conducting an educational campaign among the neighbors of the paign among the neighbors of the camp. This is supplemented by a systematic effort to cure malarial diseases throughout the civil population and to insure the proper screening of all houses. The danger from malaria is great, not only in proportion to the number of mosquito carriers but also in proportion to the number of malarial cases from which these carriers borrow the contagion.
