1,800 Camp Meade Men Sent to Camp Hancock

Camp Meade, Md., Dec. 11,-With the thermometer far below the freez-

Army stationed here shivered and their toeth chattered yesterday as mighty blasts of wind swept across the open fields. There was some hesitation on the part of many of the boys to leave their warm cots when reveille was sounded in the early morning hours. At that time the thermometer registered seven degrees above zero. However, after the lads had jumped around a bit and breakfasted, they went at the training work with a vim. The Pennsylvania boys showed up well in the cold, and some of them soon shed their outer coats, so strenuously did they so at their work.

The cold weather has played havec with everything at the camp. The water supply has suffered the greatest, all the pipes being frozen yesterday. It was even a difficult matter to get water for the horses.

From now on the Red Cross will have the biggest job of all, that of distributing presents, The presents are beginning to come in already.

Orders have just been received that will send 1,800 men from the camp here to Camp Hancock, at Augusta. At least 1,500 of these will be Pennsylvanians. The fact that they will move before Christmas is not liked by many, but they are inclined to believe the move an indication of early service in France. Most of the men who are to leave are familiar with motor truck driving or construction.

SIXTY HENS STOLEN

LEADERS IN GRE AT SUFFRAGE CONVENTION AT WASHINGTON

The selection of men for the officers training camp which opens here January 5, is well under way and there is quite a bit of anxiety among the Pennsylvania men particularly, to know whether or not their names are on the lists of fortunate ones. The time limit for the selected men to make application to attend this camp has passed and the company and regimental commanders are now selecting the men.

General Nicholson, in a few days will announce the officers who will compose the special board to review the names of those suggested for appointment to the camp.

New Facts About Teeth

Which Supplant All Former Theories By Wm. M. Ruthrauff, A. B., A. M.

All Statements Approved by High Dental Authorities

The Source of All **Tooth Troubles**

Is a Slimy, Albuminous Film

Now it is known that a film on the teeth is the basic cause of all tooth troubles.

That discovery has upset many former theories. Now it is known that tooth preservation demands that film's removal.

You can feel the film with your tongue - a slimy film-even after brushing. But you cannot see it, for the film, unless stained, is trans-

parent. That is why teeth look clean. It absorbs stains-nicotine stains in partic-

ular. That is why teeth discolor. That film is albuminous. Therefore it forms

a perfect breeding place for germs. And germs are a cause of pyorrhea.

It clings to the teeth, grows thicker and firmer, and finally hardens into tartar. And tartar is another cause of pyorrhea.

It holds food particles which shortly ferment, forming lactic acid. And that's the cause of tooth decay.

So that film causes all tooth troubles. The most common is tooth decay. That is caused by an acid which that film holds in contact with the tooth. The film protects it where

it can't be reached by neutralizing alkalies.

The most dreaded is pyorrhea. That is a disease caused by tartar and germs. Both are the result of that film.

Tartar is hardened film. Stains and discolorments are in the film.

Thus clean teeth mean filmless teeth. Brush them as often as you will. Use any dentifrice you choose. While that film exists your teeth remain unclean. They remain unsafe. Germs are bound to breed around them. Decay cannot be avoided. Teeth will not long stay white. New-day dentistry is founded on

Feel your teeth now. That film is there, no matter when you cleaned them. Your dentist will assure you that it must be kept away.

this fact.

Present Free-Tube Coupon to

GEO. A. GORGAS 16 North Third St.

Brushing Does Not Remove It

Soapy Applications Harden It

That film resists the tooth brush, and in crevices escapes it. So ordinary brushing does not clean the teeth.

Every soapy application has alkali in it. And alkali hardens albumin.

That is why our old methods proved ineffective. That is why tartar formed. That is why teeth discolored and decayed. That is why they bred germs, despite all our attention.

We brushed them, but did not dislodge all the film. A stain like iodine will prove this.

Three years ago a way was found to keep rid of this film by the aid of a digestant. Five governments already have granted patents on it.

The way is called Pepsodent. The basis is pepsin, the digestant of albumin.

But pepsin alone won't do it. It must be activated by an acid. And the usual acid-hydrochloric—is destructive to the teeth.

The solution was found in an acid salt-a neutralized acid which will activate pepsin. That discovery made Pepsodent possible. And with it came this revolution in the use of denti-

Pepsodent brings activated pepsin in contact with that film. The object is to digest and dissolve it, so brushing can remove it. Two or three applications will show its amazing results. Your teeth will feel as though just cleaned by a dentist's polisher. You will know that the film has met a dentifrice which it can't resist.

Exchange this coupon for a One-Week Tube to prove this. It is free. Use it, and let the clear results argue for themselves. You will never go back to a dentifrice which leaves your teeth coated with film. Please act today. Clean, white, filmless teeth are too important to delay. Cut out the coupon now.
