What To Do For Nervous Indigestion

When nerves go wrong they always strike at your weakest spot. When this spot happens to be the stomach, nervous dyspepsia results, appetite vanishes, and you are plagued by an easy, hollow feeling that keeps up until every day of your body seems on edge. The food you force down won't digest properly, and you're all in—down and out for one day, and so far as being really useful to yourself or anyone else is concerned. It's the height of folly to force the digestion of food with some pepsin pill while the stomach nerves are in such shape. Get your nerves right and you'll find it easy to eat and digest what you eat as any normal, healthy person should.
