Does a Merchant give as much thought to his service as he does to his goods?

IN these days of standard articles and close competition, most merchants realize that they must win and hold business by service. And yet how many of them give as much thought and care to their service as they do to buying their stock? For instance, how does a merchant select a delivery unit? Efficient, economical delivery is not a question of getting a horse and wagon or an automobile that you can get cheap, to carry your customer's merchandise.

It is a question of getting a delivery car that will stand up under the hardest road and traffic conditions and operate at the lowest possible cost. That car is the Vim Delivery Car built for delivery, and delivery only. Designed with an eye to truck service, because a delivery car must buck the same sort of conditions that a three or five-ton truck has to buck—with just as heavy a load in proportion to its weight. The Vim Delivery Car has a truck engine. It has extra strong rears, like a truck. It is assembled, reinforced and put-together-to-stay like a truck. The Vim has no pleasure car parts nor makeshift attachments. It is the cheapest delivery unit to operate per mile of use.

The chassis sells for \$845. Complete with Open Express body \$915; with Closed Panel body \$955. Fourteen standard types of body. All prices F.O.B. Philadelphia. Special Deferred Payment Plan enables you to pay for the Vim gradually out of its earnings.
