

### DUPONT MADE MOST MUNITIONS Supplied Forty Per Cent. of Explosives For Allies During War

Wilmington, Del., March 6.—The annual report of the Dupont Powder Company shows that company supplied 40 per cent. of all the explosives made throughout the world for the United States and associated nations in the war. During the four years of war the Dupont company produced 1,466,761,219 pounds of military explosives. According to the report the company holds the record as the only munition producing concern that reduced prices on a military essential during war times. The manufacture of explosives brought into the treasury a gross business of more than \$1,000,000,000.

The munition business has been almost completely eliminated, the report said. War contracts amounting to \$260,000,000 have been cancelled, the working force has been reduced from \$5,838 to \$3,000 and the company has settled down to the development of its commercial business.

The military powder factories constructed by the company cover fourteen square miles. There were 1,330,000,000 pounds of cotton used in the production of explosives during the war and 2,812,000,000 pounds of nitrate of soda brought from Chile to produce 1,930,000,000 pounds of nitric acid.

The report also stated that 347 employees lost their lives during the period of the war in the production of powder.

### Fresh Fish Frozen, Fine, Say Specialists

Washington, March 6.—More Americans would enjoy fish if they would get the kind that is frozen hard and soon as they are drawn from the deep, cool sea. This method of freezing fish, then sealing in a jacket of ice, hardly before the wiggle is out of their tails, preserves the fine flavor of fresh fish, say specialists of the Bureau of Chemistry, United States Department of Agriculture, after studying the subject of how to get fish to the consumer in the best of condition.

If the retailer turns up his nose and says scornfully, "We never carry any cold storage fish," just have him order a few pounds of hard frozen fish from his wholesaler. Have him get the right kind—fine bloater mackerel (not Spanish), weakfish, whiting or herring. There is a large supply of hard frozen fish of these kinds, accumulated to provide for war needs but not yet used, say department specialists, and they sell for considerably less than the unfrozen winter-time supply. This is not because the unfrozen fish are better, the specialists say, but because the frozen fish were caught in the late summer when the schools are large and are fat and plentiful.
