

BRITISH SCHOOLS BACK TO NORMAL

Big Universities Are Again Filling Up With Students

Washington, May 30.—The great universities of England whose student bodies and teaching staffs were greatly depleted by service in the army or in government offices during the war are again filling with students and resuming normal life. This is shown by a letter received here by Lieutenant Colonel J. C. Pauthorpe of the British Embassy from A. L. Smith, Master of Balliol College, Oxford. New schools are being opened at Oxford and plans for greater efficiency are being put into effect, he writes.

THIN PEOPLE SHOULD TAKE PHOSPHATE

Nothing Like Plain Bitro-Phosphate to Put on Firm, Health and to Increase Strength, Vigor and Nerve Force

Judging from the countless preparations and treatments which are continually being advertised for the purpose of making thin people fleshy, developing arms, neck and bust, and replacing ugly hollows and angles by the soft curved lines of health and beauty, there are a vast number of thousands of men and women who keenly feel their excessive thinness.

GEORGIA HAMILTON. Nothing that will supply this deficiency so well as the organic phosphate known among druggists as bitro-phosphate, which is a powerful and is sold by most all druggists under a guarantee of satisfaction or money back by feeding the nerves directly and by supplying the body cells with the necessary phosphoric food elements bitro-phosphate should produce a welcome transformation in the appearance of the individual, weight frequently being astonishing.

Increase in weight also carries with it a general improvement in the health. Nervousness, sleeplessness and lack of energy, which nearly always accompany excessive thinness, should soon disappear, dull eyes ought to brighten, and pale cheeks glow with the bloom of perfect health. Miss Georgia Hamilton, who was once thin and frail, reporting her own experience, writes: "Bitro-Phosphate has brought about a magic transformation with me. I gained 15 pounds and never before felt so well."

7 A DAY FOR 7 DAYS

If Your Nerves Are Shaky Because of Over-Indulgence in Tobacco or Alcohol or by Excess of Any Kind, Bio-Ferren is What You Need Right Away.

Don't grow old before your time, don't let nervousness wreck your happiness or chances in life. The man with strong, steady nerves is full of vigor, energy, ambition and confidence.

You can have nerves of steel, firm step, new courage and keen mind by putting your blood and nerves in first-class shape with mighty Bio-Ferren, new discovery, inexpensive and efficient.

Men and women who get up so tired in the morning that they have to drag themselves to their daily labor will in just a few days arise with clear mind, definite purpose and loads of ambition.

All you have to do is to take two Bio-Ferren tablets after each meal and one at bedtime—7 a day for 7 days—then reduce to one after each meal until all are gone.

Then if your energy and endurance haven't doubled, if your mind isn't keener and eyes brighter, if you don't feel twice as ambitious as before, any druggist anywhere will return the purchase price—gladly and freely.

Bio-Ferren is without doubt the grandest remedy for nervous, run-down, weak, anemic men and women ever offered and is not at all expensive. All druggists in this city and vicinity have a supply on hand—sell many packages.

FASCINATING TEETH

How Every Woman Can Quickly Charm Her Friends With Lovely Teeth, Clean, White and Brilliant

If you want the cleanest of white teeth and healthy gums free from disease, an easy and quick way to get both is to use a tooth paste so effective and perfect that astonishing results usually come in a week's time.

And the cost is so little. Just go to any drug or department store, and get a large tube of SENRECO TOOTH PASTE for 35 cents.

Not only will it make your teeth clean and white, but it will at once remove any filmy coating, help to check the ravages of Pyorrhea and banish acidity in the mouth.

It is used by thousands of dentists and its sale has been remarkable. When you visit your dentist, which you should do at least twice a year, ask him about SENRECO. It's a most delightful and refreshing tooth paste.

including 16 Victoria Crosses. The figures of the forty colleges of Oxford and Cambridge, the Master writes that owing to the response for war service, the student life "dwindled to a thread." He adds that "the importance of the response of these two older universities was that if filled up the gap between the destruction of the Regular army in the fighting of August and September of 1914 and the coming forward of the newly trained territorials in the spring of 1915. This immediate response to the call of the country and the personal courage and devotion of these young men were a complete and decisive answer to any 'class' jealousy or feeling that the workers were being made to bear the brunt."

Will "Snap" Eclipse From an Aeroplane

By GARRETT P. SERVISS One of the most interesting astronomical experiments that have been tried in a long time will be Prof. David Todd's attempt to photograph the total eclipse of the sun May 29 from a naval aeroplane sent up to an elevation of 10,000 or 15,000 feet from a ship in the middle of the Atlantic ocean, between Africa and South America.

If it succeeds the result may be a great advance in our knowledge of what is, perhaps, the most mysterious phenomenon in the solar system — the corona of the sun — which is believed to serve as an index of the sun's electromagnetic control over the earth. This wonderful phenomenon, which always arouses a profound sentiment of awe in every beholder, appears in the form of a vast "glory," composed of a glowing orb of the moon as it covers the sun, and great rays and streamers, often of strange shapes, extending outward from the crown to distances of millions of miles.

The corona varies both in general shape and in details, as seen during successive eclipses, and these variations are believed to accord in some manner with the character and intensity of the solar activity, which are also indicated by the existence and motions of apparently black spots on the sun's surface.

It has been proved that magnetic storms on the earth are somehow connected with these mysterious happenings on the sun. The connection is sometimes startlingly plain, as in the case of the great aurora borealis of immense curtains of lambent electric fire, called the aurora borealis, which is not infrequently accompanied by violent sparks leaping from telegraphic instruments.

Unfortunately, owing to the glare produced by sunlight in the atmosphere, the corona cannot be seen except when the opaque body of the moon intervenes to shut out the sun, black screen, the disk of the sun, whereupon the strange "glory" bursts into view. Usually the total obscuration by the moon lasts but one or two minutes, but on this occasion it will last more than six minutes and a half.

A total solar eclipse has rarely been seen from a great altitude because the path of such an eclipse is narrow and seldom happens to run over a mountain peak attainable by astronomers with their instruments. For this reason Professor Todd's observation, if successful, will be unique. At a height of about two miles nearly all the clouds, which often spoil eclipse observations from lower levels, will be surmounted, and in addition to that the observer with his photographic instrument will be above that part of the atmosphere which is most effective in cutting off the active rays of light which are the ones that affect the photographic plate. Thus there is reason to hope that the photographs obtained will be much better, and perhaps incomparably better, than any hitherto taken.

One great difficulty in the way of astronomical observation presented by a ship at sea may be avoided by the use of an aeroplane. Owing to the constant agitation of the ocean's surface, even in calm weather, by the slow heaving and swelling of the surface of the water, it is impossible to maintain the pointing of an instrument in a fixed direction; but in the case of a relatively faint phenomenon like the corona it is necessary to expose the photographic plate for a considerable interval of time in order to obtain a good impression of the light. Of course if the instrument is swayed by a rocking motion of its base it cannot be kept steadily pointed at its object, and only a blurred picture will be obtained.

With an aeroplane, however, this trouble may be largely, if not entirely, eliminated, since the aeroplane does not oscillate like a ship, but when held on a steady course glides with remarkable smoothness through the air and moves on an even beam.

If it rolled like a ship it would disconcert the aim, swinging the instrument through, perhaps, several degrees of arc in a second, but in the calm weather the only motion of the aeroplane is in the direction of its flight. This motion, as long as it is straightaway, and its inclination to the horizontal does not vary, would not affect the pointing of an instrument toward an object at a practically infinite distance. It would only be necessary to hold the aeroplane on a virtually straight course during the time the photographic exposure was being made.

On the other hand, if the course were circular the direction of inclination of the "deck" would swing round all the points of the compass, unless the circling was performed in a perfectly horizontal plane. Efforts to counteract this by means of a gyroscopic would probably not prove practicable.

Professor Todd has been present at almost every total solar eclipse in the past forty years, and his attempt to see the spectacle this time from the "flies" will be watched by the astronomers of the whole world with deep interest.

German Firms Suffer Because of Strikes Berlin, May 30.—The ever recurring strikes of miners are causing a catastrophic condition in the Rhenish-Westphalian mining region. One company has declared itself insolvent because of strikes. A cabinet minister recently stated at the Soviet Congress in Berlin that the demands of the miners had ruined a number of mining companies.

Two mining concerns which in November last had a reserve of 15,000,000 marks, now have overdrafts at the bank of 12,000,000 marks and the banks refuse to give them further credit.

THE STORE THAT CLOSSES SATURDAYS AT SIX

BELL 1991—2356 UNITED

With Further Reference To Saturday Night Closing

Another City Wants To Know!

We received the following letter from the Retail Saleswomen's Association of Jamestown, N. Y. "We understand the stores in your city close at six o'clock Saturdays. Will you kindly inform us how this movement was brought about and what the result to business.

There is an agitation in our city to close Saturday nights and this association is anxious to get data on the subject. Anything you can tell us about it will be appreciated."

Of special interest in this reference — "and what the result to business." When employers are as considerate of their employees interest as this, the employer surely ought to be equally as mindful of the employees welfare. Our reply in part was as follows:

"Formerly our store was open until nine o'clock, and since closing at six o'clock there have been only three Saturdays that our sales have been less than the same Saturday of the previous year; this was caused by adverse weather conditions. Our sales during the week have greatly increased, and our business has continued to make large increases in sales."

Although a number of local merchants have recently joined in this progressive movement, we had to refer them to York for an example of concerted action.

Many New Bags Are Here

Nothing gives more of a touch of individuality to a woman's outfit than the bag that she carries. And there are the smartest and cleverest sorts to choose from this Spring. Of course, it is hard to find one that will suit ALL occasions. That's why most women must have two or three.

The one that you'll like most, is here, of course. Beauty cases with different fittings; black and also colors, \$4.25 and \$4.50. Canteen boxes in black and colors; fitted and unfitted, \$2.50 to \$6.98.

Liberty Vanities in colors with all the useful fittings, \$5.50. Every style of strap purse.. Top and back strap, black and all colors, 59c to \$15.00.

BOWMAN'S—Main Floor.

Saturday Specials
