school district to secure an injunction preventing collection of these taxes pending a court decision.

It was alleged by the company that all the lands amounting to 355 acres, including three islands, were to be used for public service. The court ruled, however, that only about twenty acres would be needed for the improvements which the company announced its intention to make, allowing 375 acres for school taxation. The largest island owned by the company is known as Duffy's Island, containing 365 acres and assessed at \$28,000. The other two small islands, near the large one each contain about fifteen acres and are valued at \$100 each.

To Free Colleges of German Propaganda

New York, July 10. — Prominent educators and chemists have launch-ed a vigorous movement for driving an insidious form of German propaganda from the universities and scientific schools of the United States, according to a bulletin issued to-day by the American Chemical

to-day by the American Chemical Society.

They are following the policy inaugurated by the Indiana State Board of Education, which has already directed its superintendent of public instruction to issue a letter to all schools under his jurisdiction insisting that every piece of chemical apparatus, and all scientific supplies purchased for educational purposes be purchased in the United States. This action was taken upon the reading of a letter from Harry reading of a letter from Harry Barnard, State Food and Drug E. Barnard, State Food and Drug Commissioner of Indiana, in which he pointed out that the supremacy of German-made chemical supplies was still in the ascendant on account of the crafty way in which the Teuton manufacturers had availed themselves of a peculiar clause in the tariff act.

Under this provision, American universities, colleges and schools, are permitted to import chemical glassware and porcelain and scientific apparatus free of duty.
