Believe It Will Be Years Before Living **Conditions Near Normal**

Coblenz, Sept. 3 .- Living conditions in the interior of Germany are rapidly adjusting themselves as a Joker Causes Rush rapidly adjusting themselves as a result of the lifting of the blockade by the Allies. According to the German newspapers, however, it may be years before food prices become normal or virtually the same as they were before the war. Some German editorial writers, complaining of high prices at the present time and during the years of war, contend bitterly that the low cost of living enjoyed by Germany for so many years is forever past.

As an indication of improvement in the food situation in one German for Leipzig of recent date says:

"Profiteering trade prices plainly show a falling off since the lifting of the blockade. The overcharges on pork have long since been removed and the fat shortage has ceased. Everywhere one finds in

than a week?

the eating places beef, veal and pork meat without limitation at reasonable prices. One can once more eat at noon in Cologne for 4.50 marks and in a wine restaurant for 5.50 marks; therefore it appears as if acceptable conditions are coming."

They Dance, Then Blister; Fox Trot Is in Danger

Baltimore, Sept. 3 .- The dancers of the Eastern Shore of Maryland and Delaware are alarmed over a new contagion known locally as the "fox trot blister" which has broken out among them and which threat-ens to stop all dancing in that section unless a remedy can be found.

The "fox trot blister" is a skin eruption which physicians as yet have failed to identify by any other name. It is found principally among those who dance the latest steps. as these bring the faces of the dancers in close contact. Thus the spread of the malady is easy, physicians say. The disease causes blisters on the face. The ailment first made its appearance at the Delaware and Maryland seashore

eign Commerce, in stating yesterday that the solution of the high, living costs and unrest over the country was in more work and less spending, cited a conversation with a shoe manufacturer as an illustration. The manufacturer told him that recently the concern decided to put on the market a woman's shoe at \$6\$ to \$8\$ a pair. The shoes were not inferior in quality, but low according to the present price scale After a short time the shoes had to be withdrawn because they wouldn't "turn over," the manufacturer said. "What the women insisted on," he declared, "was not a good shoe, but a shoe for which they could pay \$12\$ a pair."
