## See the New Easy Vacuum Electric Washer

Now Operating in Window

When washer is in operation, the two vacuum cups inside the tub move up and down 60 times per minute, taking a new position on each downward stroke. The air contained in the cups on the down stroke forces the soapy water through the mesh of the garments. While on the up stroke, the cups suck the soapy water back through the mesh. This suction carries with it any foreign substances and dirt lodged in the mesh—it does not in the least injure the daintiest laces, flannels, lingerie, etc.; in fact, it preserves them, there being no dragging, rubbing or jerking of the clothes over cleated or corrugated surfaces.
