The Latest Scientific Invention, the Calorific.

To give some idea of the peculiarities of the stove in question, me may state that by a highly scientific and patent arrangement the excessive heat on the top of the stove which causes the centre pieces in barn out, is carried around the oven, equaling the heat of the stove, and causing the lattom of the oven to be just as hot as the top 'art of the stove; by this arrangement, there fore, all danger of burning out the centre pieces (usual to all cooking stoves) is effectually obviated. What is more, the fire and oven can be easily regulated to any degree of heat, by means of this patent arrangement. rangement, thus avoiding the necessity of giving the stove constant attention while aking, in order to prevent it becoming too tot or too cold; another advantage which this stove possesses to persons who use bi-luminous coal, is, that by the aid of the patent in question, it consumes the latter as readily as anthracite; in short, the operation of this stove, which is as beautiful as it is efficient, leaves nothing to be desired. We would also state that these stoves can be readily supplied with a patent copper-back boiler, by which all the hot water required in a family, can be heated by the waste heat from the stove. To persons residing in the country, this stove comes as a special blessing, as it affords them all the advantages of a cooking range, with none of the annoyances; a water-back can easily be attached to it at a trifling cost, which will heat water equal to a cooking range without the inconvenience or expense having a range built in the fire place. W will take the liberty of suggesting that to persons about going to house keeping, too much importance cannot be attached to the necessity of having the best possible cooking facilities. The great feature that it does not require constant attention, that when the oven is once fixed, there is not the slightest risk from carelessness or neglect, and that the temperature of the stove is absolutely uniform at the top and bot-tom, are alone sufficient to eclipse all other stoves in use, we would advise all persons who think of purchasing, to call at the ware-rooms of ISAAC HAUPT, near the depot, at Bellefonte, where he keeps all of Spears' make of stoves. All of the above patents can be applied to the celebrated anti-cust Cookstove heretofore sold by him. Prices, 10 per ct. less than market value for each value, for cash. Isaac Haupt, Bellefonte,
