On Wednesday morning, soon after the works were started, he deliberately walked to the large iron shears, and before any one was aware of his design, placed his arms between the blades, poth of which were completely severed about midway between the hands and elbows. The horrible act was performed so coelly and deliberately that no suspicion was entertained of his design. When questioned as to his motive for the self-mutilation, he replied that "his hands had been the means of sending him to the penitentiary once, and he was determined they should never get him into trouble again.
