In a paper on this subject recently read efore the London Association of Foreman Engineers, the author stated that those who conducted the process of manu facturing iron castings were little, if at all indebted to any published works on science or art.depending mostly on their own ingenuity and personal experience in conduc-ting the work. The different qualities of pig irou is an intricate subject to under stand, because there is such diversity among them, and without a knowledge o their nature the moulders cannot work to advantage. The density of one brand sometimes differs from another to the extent of twelve pounds to the cubic foot, and as the cohesive strength is generally in proportion to the density of iron, the Mcdium Department—Misses M. White moulder must know this in order to produce castings for different purposes.— There is also great diversity in the crystallization, as well as in the fusibility and fluidity of different pig irons. Some are distinguished for a fine, firm grain, others for purity and freedom from dross, and the beautiful polish which is

This action is necessary, it would appear, from "the want of energy, or from other cause," of the owners of the mills. It promises, at all events, to meet the emer

Painful Accident. On Monday morning a lad named Taylor, employed in Coleman's rolling mill, met with a shocking accident. It appears that it was his duty to seize the bar as it came through the roll for the last time and the assistance of another lad straighten it. By some means he failed ing, August 4th. to catch the end of one of the bars of half inch iron, and it passed through his leg, requiring the use of the tongs to withdraw it. Several young men of Parkersburg, known to be rebels, have recently left that place, it is believed with a view of joining the Moccasin Rangers, whose numbers are constantly increasing. The guerrillas are becoming very bold and saucy, and there is every reason to anticipate that they intend making a raid upon the border.

In regard to Exemphitic, Anthons, Consumption, diseases which are so fataly interesting to a large portion of mankind, and evidently on the increase in the United tates of America; it is desirable that correct ideas should exam so he as the present advanced condition of medical science can furnish them.

We know that in all diseases a timely application of rational remedies is more than half the battle, and the aphorism which resches that "prevention is better than a cure," applies with recular force to the case of Communition, which, if once FRMLY established, rarely, if ever, gives way, even in the most skillul treatment and the most section of the spects of the disease (scrofalous disthesis) in the medices or their condition, not fail to obtain such salutary advice, with rese MONONGAHELA HOUSE.

not fail to obtain such salutary advice, with rete-rence to the regulation of their diet and the pres-ervation of their health, as my long experience enables me to give them.

Note—For the information of patients suffer-ng from Catarrh, Sore Throat, Bronchitis, Asth-ima, and Consumption, I wish to state that my visit to Pittsburgh cannot pessibly be axtended beyond four weeks from this date. Patients should, therefore, embrace the oppor-tunity to consult me at once whether

unity to consult me at once, or at the earliest conenience; they thereby insure to themselves the privilege of beginning, and (In some cases) completing their cure under my own personal direction, while afterwards they will have to depend on written directions or correspondence.

In order to extend the benefits of the treatment by Inhalation to the less wealthy citizens of Pittsburgh, I am willing to accept cases at a reluced fee.
