> FLAVORING MATTERS .- One of the most remarkable, and interesting achievements of modern chemistry has been the preparation of certain liquids possessing the flavors of various fruits. So close indeed is the resemblance that we are almost warranted in supposing the flavor of the fruits to be actually caused by the presence of a trace of the above liquids. Several of these articles are employed in confectionary, and are manufactured on a tolerably large scale. The acctate of amylic erly authenticated for settlement, to oxyd, when dissolved in six times its bulk of alcohol, emits a most powerful and agreeable odor of pears, and is used in flavoring pear drops. The valerate of amyle, dissolved in alcohol, gives the scent and flavor of apples .-Butyric-ether communicates the flavor of the pineapple, and is used in the preparation of various beverages. Various other compounds of the so-called fatty acids, with the oxyd of amyle and ethyle, possess very pleasing odors, -Scientific American.

MR. OLIVER'S MINORITY REPORT.

This gentleman, as our readers are aware, was one of the Congressional Committee that went to Kansas to inquire into the alleged outrages and wrongs, of which so much has been said. He did not co-operate very kindly with his colleagues, Messrs. Howard and Sherman, for the best of reasons, viz: that the disclosures there made bore very hard against the side he had espoused, and against a large number of Missourians, a part of whom are Mr. Oliver's constituents, who went into Kansas to help the people in voting.
