SICKNESS.

THERE are many persons that we didly behold whose counts nances and frail timbs denote. Illictime which we find has principally originated from neglect of proper remadica at the commancement of sickness. At first the patient complains of bile on the stomach attended with sickness, costiveness, &c., he neglects to procure proper medicines, at lenth he complains of pain in the side and somach with sour cructations; his appetite becomes impaired his rest trouble ome, his mind harassed, and all things around him appear not in their proper station. He still neglects himself, when in all probability the disease may at leath be so fast scated that no medical aid will replace him again. Works of Nature.

IN a state of health the intestinal canal may be joining land, through the channels nature or art has made, and improves their qualities; and to keep up the comparison of the river, so long as it runs on smo they the channels are kept pore and healthy; but if by some cause the course of the river is step ped, then the water in the canals is no long ratire. but soon becomes stagment. There is but one law of circulation in nature. When there is a superabundance of humorial fluid (screeity) in the intestipal tubes, and costiveness takes place, it il wa back into the blood ves els, and infil rates itself into the circulation. To establish the free course of the river, we must remove the o'structions which stop its free course, and tho e of its te butary stream.
