THE DIFFERENCE,-The contrast between the condition of the female population of Great engune, Britain and the same class in this country is very forcibly set off in the following extract from a speech at a public meeting in Liverpool. delivered by an Englishman just returned from the United States:

At Boston, he went out by a railway to a city containing 25,000 inhabitants, which was not in existence fifteen years ago. Now it has a capital invested in mills of more than 2,000,-000 pounds sterling. He saw the operatives turn out, and he could not distinguish the factory girls from what are here called young ladies. 'They carried nurgiols ! He incorred their wages. He was teld that they were two and a haif dollars per week after, paying all expenses of board. A spinner got \$4,50 after paying all expenses of board. He returned from that city to Boston and in twelve days after that was in Liverpool. The first sight the streets.

The Louisville Journal furnishes the following sketch of a rather during movement of a young lady :

Thereupon the young lady instantly seized a large pistel that chanced to be in the apartment, of not guilty. cooked it, presenting it at him, and declared her determination to blow his brains out if he did not instantly fly. He knew from her countenance that she would be as good as her word, and snatching some small articles of dress from a chair within arm's length of the window, he fled with precipitation. We are told that the young heroine would have fired if she had known that the pastel was certainly loaded; but would be tray her defence tessuesz.
