HERR DRIBBACH .- Combat with Wolves --Two Rocky Mountain wolves escaped from their cage in the managerie of Herr Driesbach at Zanesville, Ohio, on the 11th, and the Gazette gives the following account of the conflict to secure them :-

At the time, there were four men in the building, Herr Driesbach, Paul Morgan, Abraham Shimer, and Arthur Crippen ; but accustomed as they were to such animals that were fastened in different parts of the building, without apprehending personal danger to themselves. Crippen ran out of the building to get a pitchfork, when closing the door after him, it fastened itself, which kept him out. Morgan hastened to take care of the riding monkey, when one of the wolves attacked him and got him down, and as Shimer ran to his assistance, he was attacked and overpowered by the other wolf. At this moment, Driesbach was the only one disengaged, and picking up a chair, he dashed it to pieces, to obtain a round for a club. With this at one blow he disabled the wolf that had attacked Shimer, but the other held with a death grip and required repeated blows; nor did he relinquish the attack until he was knocked dead. The disabled one was afterwards shot. The men were badly bitten, and had they been alone, would inevitably have been killed, for one of them was already fainting.

NEW PROCESS OF TANNING .- A recent discovery in the art of tanning leather has been made by Dr. Turnbull, of London, which is said in a French paper "to eclipse every thing that has been discovered in the practical arts for these hundred years." The process is described in a communication to the Academy of Sciences. When a membrane intervenes between two liquids of different densities, they produce two currents, the one outward called extosmosis, and the other inward called endosmosis. By this new physical law the currents interchange until they become of the same specific gravity; thus Dr. Turnbull, by sewing up a hide filled with one liquid of a certain specific gravity, and then immersing the hide in another liquid of greater or lesser density, keeps up this reciprocal action until such time as the hide is thoroughly tanned. By the ordinary process of tanning it requires eighteen months to tan an ox hide, and 400 pounds of bark. Dr. Turnbull tans the hide in fourteen days, and with only 100 pounds of bark. This process gives an extra weight of leather, varying from 15 to 25 pounds per cent. Calves' skins, which under the old process require an immersion in the vat of five, six, and seven months, are by the new process tanned in two days. This rapidity of execution is by no means attended with inferiority to the leather produced. On the contrary, it is said to become much better, all the saturation required for the production of good leather, being as fully effected by the new as the old process.

BRANDRETH'S PILLS by cleansing the Blood from all impurities, gives power to every organ to perform its functions healthily; no matter whether externally or internally situated. Nature has formd the bowels for the evacuation of all unhealthy numors of the blood, and if man would but use common sense, he would take care they performed his office fauthfully. If the howels are out of orer, if too slow or too fast, a few doses of Brandreth lills will bring them to order. Ask the man who eas dying from constinated bowels what cured him; e tells you, Brandreth Pills. Ask him who has ad the dysentery for six months, and every remey had failed; he will tell you that Brandreth Pills ared him in a week. So with other diseases. welve Brandreth Pills rubbed down in a half pint I molasses, cured a little boy of an ulcer of the face hich was rapidly spreading to his eyes, and which dozen doctors had tried to cure; the poor parents ould have given half they were worth to have had cured, but every thing they tried did no good, unthey gave it a tes spoonful of molasses every v, in half a pint of which they had subbed down elve Brandreth's Pills; before the whole of the plasses was taken, the ufcer was cured.
