

Miscellany.

THE DANGERS OF SPRING.—We have the highest medical authority for saying that a great many more persons die in May than in November. The natural cause, 1st—The increased dampness of the atmosphere, proven by the fact that doors which shut easily in winter, do not do so in the summer. 2d—Nature takes away the appetite for meals, for heat giving food, in order to prepare the body for the increased temperature of summer. But two errors in practice at this time interfere with wise nature's arrangements, and induce many and painful and dangerous diseases. First, the amount of clothing is diminished too soon. Second, the conveniences of fire in our dwellings are removed too early. All persons, especially children, old people, and those in delicate health, should not remove the thickest woolen flannel of mid-winter, until some time in May, and then it should be merely a change to a little thinner material. Furnaces should not be removed, nor fire-places and grates cleaned for the summer, until the first of June; for a brisk fire in the grate is sometimes very comfortable in the last week in May; that may be a rare occurrence, but as it does sometimes take place, it is better to be prepared for it than to sit shivering for half a day, with the risk to ourselves and children, of some violent attack of spring diseases. By inattention to these things, four causes are in operation to chill the body and induce colds and fevers. First, The dampness of the atmosphere in May. Second, That striking falling off in appetite for meals and other "heating" food. Third, The premature diminution of clothing. Fourth, The too early removal of the conveniences of fire. And when the very changing condition of the weather of May is taken into account, it is no wonder that under the influence of so many causes of diminution of the temperature of the body, many fall victims to disease. In November, the healthiest month in the year, we have put on our warmest clothing, kindled our daily fires, we have found a keen relish for substantial food, while the dampness of the atmosphere has been relieved by the condensation of increasing cold. The wise will remember these things for a lifetime, and teach them to their children.

DIMENSIONS OF AMERICAN LAKES.—The greatest length of Lake Superior is 435 miles; its greatest breadth is 160 miles; mean depth 978 feet; elevation 627 feet; area 32,000 square miles. The greatest length of Lake Michigan is 350 miles; its greatest breadth 108 miles; mean depth 900 feet; elevation 587 feet; area 23,000 square miles. The greatest length of Lake Huron is 300 miles; its greatest breadth 108 miles; mean depth 800 feet; elevation 547 feet; area 20,000 square miles. The greatest length of Lake Erie is 250 miles; its greatest breadth 80 miles; its mean depth 81 feet; elevation 555 feet; area 9,000 square miles. The greatest length of Lake Ontario is 180 miles; its greatest breadth 65 miles; its mean depth 590 feet; elevation 292 feet; area 6,000 square miles. The total length of all five lakes is 1,585 miles; covering an area altogether of upward of 90,000 square miles.

HOW THE THISTLE SAVED SCOTLAND.—The following is related as the origin of the use of the thistle, as the national emblem of Scotland:—When the Danes invaded Scotland, they availed themselves of the pitch darkness of night to attack the Scottish forces unawares. In approaching them unobserved, and marching barefooted to prevent their tramp being heard, one of the Danes trod upon a large prickly thistle, and the sharp cry of pain which he instantly uttered suddenly apprised the Scots of their danger, who immediately ran to their arms, and defeated the foe with great slaughter. The thistle was thenceforward adopted as the national insignia of Scotland.

A ROLAND FOR AN OLIVER.—A wag of a fellow by the name of Thornton, one day got up during service and walked out of church making a rather prominent display of a gold-headed cane. The preacher, a well-known eccentric character, with a wooden leg—the result of his love of fox-hunting—immediately pounced upon him in this wise: "Pull that cane from under your arm, my young friend, and throw it away. There are no gold-headed canes in heaven." Whereupon Thornton, turning around, replied: "Pull that stick of wood out of your pants, my old friend, and throw it away. There are no wooden legs in heaven."

CURIOUS EFFECTS OF CAMOMILE.—A decoction of the leaves of common camomile will destroy all species of insect, and nothing contributes so much to the health of a garden as a number of camomile plants dispersed through it. No green-house or hot-house should ever be without it, in a green or dried state; either the stalks or the flowers will answer. It is a singular fact that, if a plant is drooping and apparently dying, in nine cases out of ten it will recover if you plant camomile near it.

DARE NOT SLEEP WITH HIM.—A Quaker and a member of one of the orthodox churches (no matter which) having stopped at a public house, agreed to sleep in the same bed. Orthodox knelt down, and prayed fervently, confessing a long catalogue of sins. After he rose, the Quaker observed: "Really, friend, if thou art as bad as thou sayest thou art, I dare not sleep with thee."
