

week for examinations, and one week for Commencement exercises.

The total amount of time devoted to any subject will not be materially altered, although the number of hours per week will necessarily be changed considerably. In some cases where the total number of hours devoted to a subject is small, it will be so arranged as to complete the subject during the term, hold an examination as soon as finished, and then devote the same amount of time per week to something else. The only extensive changes to be made in any of the courses, is the requiring of but one years mathematics in the General Science and similar courses.

One of the principle advantages to be gained by the change is that, owing to the elimination of one set of examinations, one week more of time can be devoted to study than formerly. When it is remembered that there are but thirty six weeks in all, of which from six to eight weeks are devoted to reviews and examinations, this means a considerable gain.

"And is that all of them?" asked the Critic, as he finished reading. "Well, Sir! I—" He was about to say something uncomplimentary; but noticing the scared face of the Editor, he refrained and continued, "O well, they are all right, I guess; but why don't you tear something to pieces. Now there are our Local Editors. They ask the Prof's for items. What do they get? A promise. 'O yes, you want them next week. Well, I will think it over and have something for you
