

maintenance, and will, therefore, be a great money making scheme.

The power plant will be used to start the system and then closed down. The receiving platform will be started and the turning power will start the generators, thus furnishing current to move the cars. Once started the cars will move on propelled by the electric current, and discharging their passengers on the revolving platform. The continuous stream of people alighting on the platform will keep it in motion, and thus the generators will be kept moving. This continuous motion will be kept up so long as people travel, and the power plant will come into use only in emergencies.

'04.

A FRESHMAN'S WAIL.

There is a professor named Pond,  
A 33d cousin to Mond,  
He teaches us chem. names,  
And we break his window panes—  
He draws on our damage fund.

DRY STUFF.

"From appearances, the prospects for base ball are rather uncertain for this year," remarked Jasper, as he rolled himself a cigarette from the generous supply of tobacco on the table.

"Yes, it is rather hard to predict the outcome of the season with only about three of last year's men as a nucleus about which to form a new team," said Hadley.

"There will be a good competition for the places, however," remarked the dormitory philosopher. "There are lots of S's to be made this year, and that is going to make the new fellows work hard. An S is something to be proud of. After a man has once earned it he is somewhat indifferent as to the article of ball he
