CALORIMETER EXPERIMENTS.

The Bureau of Animal Industry of the U. S. Department of Agriculture has assigned one thousand dollars of the recent Congressional appropriation for experiments in animal breeding and feeding to the co-operative investigations with the Respiration Calorimeter now in progress at the Pennsylvania Station. Plans have been made for an investigation upon the influence of age and individuality upon the metabolism of cattle and two full-blood yearling steers, one an Aberdeen Angus and one a Jersey, have been purchased for use in the investigation.

Careful records will be kept of the food consumed and the rate of growth of these animals. In addition, occasional digestion experiments will be made with them to determine the assimilability of the food and the actual production of lean meat; while each winter there will be made, with the aid of the Respiration Calorimeter, scientifically accurate determinations of the actual gains of lean meat and fat respectively. It is expected to continue the experiment until the animals are mature. In this way, it is hoped to secure more exact knowledge as to the actual points of difference in the feeding qualities of the dairy and beef types of cattle, while at the same time valuable data will be obtained as to the nature and economy of the growth made at different ages.

PREP CIDER. 09

On Friday evening, September 30, the Preps furnished a barrel of cider to the Sophomores, as is customary. The campus was quite lively for a short time.

Every student at State and every Alumnus should subscribe for the COLLEGIAN. A college paper cannot flourish on mere verbal support it must have financial backing.
