

### Freshman Physical Measurements.

The recent physical examinations of the Freshmen class furnish some interesting figures. The second examination was made six months after the first, and the measurements show gains in nearly every case.

Some of the most interesting figures are shown below. The figures given are the averages for the whole class.

Gain in height .....	.18 inches
Gain in weight.....	5.00 pounds
Gain in chest (girth).....	.81 inches
Gain in chest (breadth).....	.10 inches
Gain in chest (depth).....	.21 inches
Gain in right arm (contracted)...	.35 inches
Gain in right arm (extended)...	.27 inches
Gain in right forearm .....	.14 inches
Gain in hips.....	1.11 inches
Gain in right thigh.....	.86 inches
Gain in lung capacity.....	.21 cu. in.

The greatest individual gain in height was in the case of one diminutive Freshman who gained two inches. The greatest individual gain in lung capacity was 30 cubic inches; in weight, 26 pounds.

The results speak well for the efforts of "Pop" Golden and his able assistant, J. C. Jeffrey. The class was held only twice each week during the winter months, and it is believed that with more time for the work, much better results could have been obtained.
