

abilities in some one event have been discovered in just such contests. They have not entered into competition with recognized athletes because they felt that they could not succeed. But we look to these meets to bring out such men and develop them, which in the end will naturally strengthen our track team.

That constant practice and preparation will be necessary in order to be able to carry off honors is understood. No man can expect to gain anything unless he first shall have put himself in trim; but therein consists the value of the whole arrangement, as it is this constant persistence with a definite object in view that will in the end develop the qualities that are hidden but are, nevertheless, there, and finally enable the contestant to win out over his fellows.

The fairness of the rules is an inducement that must not be overlooked. They offer every man an equal chance to "get in the game" for all there is in it. Every fellow who takes part will derive physical benefit from it, even if he does not win a prize. Gymnasium work at State has never been so popular as it should be, but the new departure will be hailed with approval as a decided remedial measure.

#### Instruction in Bacteriology.

Miss Elizabeth B. Meek, Instructor in Bacteriology, has returned from the University of Chicago, where she has been pursuing post-graduate work, and has resumed her duties in State College. A course of the general aspects of Bacteriology will be given beginning with the second semester. The bacteriological laboratory in the new Dairy Building is being fitted with modern appliances.

#### Indoor Championship Meets.

An interesting and valuable addition to winter sports at State will be made this year in the form of a series of all-around indoor championship meets. "Pop" Golden has arranged for three meets, one on the first Friday evening of each of the months of February, March and April. The 30 yard dash, pull up, and running high jump are scheduled for February, the running broad jump, push up, and shot put for March, and the 20 yard hurdle, rope climb, and pole vault for April.

Entries will be received at any time previous to the first meet from any member of the student body, but each person must enter for every event. A chart showing the percentage allowed for a certain distance or time in each event has been posted in the gymnasium, and the final percentage will be an average of the entire series of events. Medals of gold, silver, and bronze will be awarded to each contestant who attains a final average of seventy-five, sixty-five, and fifty respectively. The requirements that each contestant shall compete in every event favors good, all around ability rather than special skill in any one event, and should result in a large number of entries. Besides awakening considerable interest, these meets should lead to the discovery of some new athletic material.

#### The State Miners. (Cont'd)

The following is the most recent list obtainable of the positions held by the late graduates from State's School of Mines and Metallurgy:
