

### A Magnificent Gift.

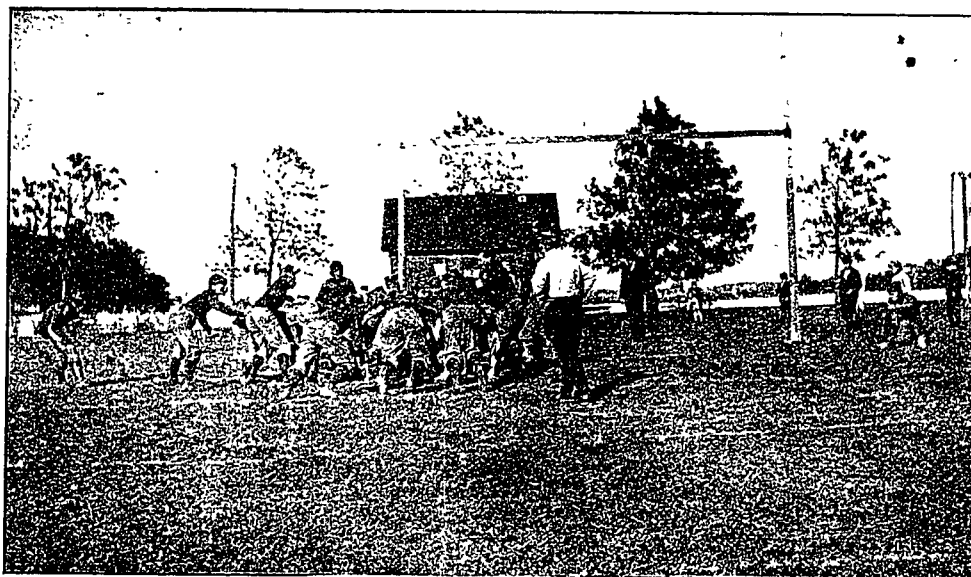

It is safe to say that no event in recent years in affairs at State has proved of deeper interest to friends of the college than the announcement of Charles M. Schwab's proposed million dollar gift for a new engineering building. While the time has not been definitely fixed, the money has been absolutely promised, and it is only a question of time until State will have one of the finest engineering buildings, with proper equipment, in the whole country.

ber of the trustees and friends of the college, including Mr. Schwab, were present. Mr. Schwab took occasion to express his own interest and that of his wife in this institution, and stated that financial matters are so shaping themselves that it will be possible in the near future for the carrying out of the contemplated plans. Since that time he has referred publicly to the project several times, and there seems to be no doubt whatever that the new buildings will be begun at no distant time.

The value of such a gift can scarcely be estimated. Our college

endowment for the Atherton Alcove by depositing with the College Treasurer one hundred and fifty dollars (\$150.), which was the balance of their damage money fund after the purchase of Dr. Atherton's library on economic and social questions, and the placing of the bronze tablet which indicates it.

"1907" has left a splendid record behind it. It not only established, and has now started the endowment of the Atherton Alcove, but with the balance in the treasury from their La Vie fund they furnished a room in and added additional

While it may not have been generally known, Mr. Schwab has had the matter under consideration for several years. Plans were drawn up at his request, and were settled upon only after a careful examination of the equipment of the best engineering schools both in this and in foreign countries. At that time Mr. Schwab expressed his willingness to furnish necessary funds, but his financial affairs were in such shape that no public mention of the matter could then be made.

Several weeks ago a dinner was given in New York at which a num-

ber of the trustees and friends of the college, including Mr. Schwab, were present. Mr. Schwab took occasion to express his own interest and that of his wife in this institution, and stated that financial matters are so shaping themselves that it will be possible in the near future for the carrying out of the contemplated plans. Since that time he has referred publicly to the project several times, and there seems to be no doubt whatever that the new buildings will be begun at no distant time.

### "1907" Still With Us.

That "Men live in deeds not years" is again demonstrated by the fact that "1907" has started an

equipment to the College Infirmary. It is a record of which the class may well be proud and it ought to be an incentive to all others to follow their example.

### Professor Osmond Retires.

After a service of many years at this institution Professor Osmond has severed his connections here and retired from active life. Professor J. P. Jackson is now dean of the School of Mathematics and Physics, but will continue to devote most of his time to work in Electrical Engineering. Dr. Ralph E. Meyers comes here from the University of
