 Math. 8 (Adv. Algebra)  
 Railroads 6  
 Sub-Freshman Rhetoric  
 Surveying 9

## "STATE IN 1920."

General Beaver Speaks Further on the Subject of Our Future and Our Social Hall.

I am asked to say a word for this number of the Collegian upon a subject to which I referred in a general way a few days ago at morning chapel, when I had the privilege of speaking to the student body.

I endeavored then to emphasize the fact that the College authorities—by which I mean trustees, faculty and students—and the people of the borough of State College all underestimate the inevitable growth of the College. During the decade from 1900 to 1910 the annual increase in the student body has been on an average 15 per cent. per annum, and this I am told, by those who have a larger experience in the growth of the land grant colleges than I have, is about the normal increase. At the same rate of increase, or even with an annual growth of twelve per cent., we will have in 1920 between 4,000 and 5,000 students. The indications are that the increase this year will probably be greater than the average above referred to. We must face the possibility of caring for 1,600 students in 1910, notwithstanding the discontinuance of the sub freshman department. The practical lesson for all who are interested in the College, therefore, is to build at the present with the idea of at least 5,000 regular students in attendance by or before 1920. With all our ideas of expansion and efforts to meet it in the past, as in the case of the Agricultural Building, we were overcrowded before our plans were scarcely more than completed.

One of the subjects in which Dr. Atherton was most interested and about which we had many conferences, was the erection of a Social Hall, planned to meet the requirements of a great student body,

which would embrace provisions for all their needs, under the control, to a very large extent, of the student body itself. The immediate control might develop upon the Y. M. C. A. or any other organization which is composed of the general student body. There should be in it provision for all the social organizations of the College, such as musical, dramatic and ethical culture clubs, with an assembly room for student body, headquarter rooms for each college class, general reading rooms, lounging rooms, physical exercise rooms for indoor exercises, involving skill, recreation and physical development, and all the best features of an up-to-date Y. M. C. A. building and club building combined. Dr. Atherton had no doubt of his ability to secure such a building on a canvass of the friends of the College and those who could be interested in the subject; indeed he thought he had at one time a promise from a gentleman who would erect the building himself. The project was not carried out, however, because of demands along similar lines which engaged and seemed to him to claim the immediate attention of this gentleman.

In view of the fact that this building would be exclusively for students, would be under their control, at least to a large extent, and would provide for pressing needs, it occurred to me that the student body should first undertake the provision for its erection and hence the intimation that at the opening of 1910 we should make a thorough canvass of all interests to secure what would be adequate provision for the student body in 1920, that is, a building which would provide all the accommodations to which reference has been made, for at least 5,000 students.

The limits of this article will, of course, preclude the possibility of a detailed description of what is in-
