

Leland Powers.

Mr. Leland Powers in concluding the last entertainment of the Y. M. C. A. course recited the original Irish drama, The Shaughraun, by Dion Boucicault. The piece was exceedingly well arranged, and Mr. Powers' interpretation of the various characters was excellent. Mr. Powers proved his originality and his genius by assuming the vastly different parts of both male and female personalities in a most realistic manner, and the evening was in consequence possibly one of the most enjoyable spent in the whole course.

One can easily comprehend from Mr. Powers' work, that he is a man who makes impersonation and recitative work a fine art, and judging from his repertoire, one can easily recognize the fact that he upholds certain high literary standards.

This entertainment was a very excellent climax to the Y. M. C. A. course, and the apparent success of the course this year should pave the way for an even more successful one next year. Here and there one at times hears criticism in regard to these various entertainments. If those who criticize will but realize what consideration they are receiving for their 25 cents, and at the same time compare this with what they could see in a city for the same amount of money, they will recognize the absurdity of their statements.

Forestry Notes.

Professor J. A. Ferguson has been appointed an advisor in the Pennsylvania Forestry Commission and a member of the Council of the Pennsylvania Forestry Association.

Professor R. R. Chaffee and Mr. H. C. Baldwin, of the Junior class in Forestry, are in the Adirondack Mountains making an estimate and

There is a difference between fruit growing and forestry  
yet most of the directions for fruit growing are directions for producing rapid wood growth only.  
This means coming into bearing late and irregular bearing on account of lack of enough available mineral plant food to raise a crop of fruit and to set strong fruit buds in the same season.

# POTASH

Two years before the trees are expected to come into bearing the annual application of minerals should begin, using 50 to 100 pounds Murate of Potash and 100 to 200 pounds of bone, acid phosphate or basic slag per acre.  
Potash improves the flavor, shipping quality and keeping power as well as the yield of fruits.  
Write us for Potash prices and for free books with formulas and directions.

survey of the timber on a large virgin forest lying along the Upper Saranac Lake. While in the Adirondacks Professor Chaffee will select a camp site for the spring practicum of eight weeks required of the Seniors in Forestry.

Professors Ferguson and Chaffee' of the Forestry Department, and Professor Waldron, of the Botanical Department, recently attended a meeting of the owners of forest land in Northwest Center County, called together to discuss methods of protecting forests from fire.

Bills have been introduced in the House and Senate of the State looking to more equitable taxation of timber lands.
