Power House Practice

Power House Practice It was in this historic valley that the first commercially successfully turbine-driven Alternating-Current Generator was developed under the direction of George Westingbouse. It was tested in the East Pittsburgh Shops in 1890. The splendid operation of this, and two duplicate machines in-stalled a year later, sounded the death knell of the recip-ocating steam engine—then in almost universal use. The steam turbine has effected remarkable savings— one of the most evident of which is floor space—the tur-bine-generator occupying from one-fourth to one-sixth the space occupied by the reciprocating engine. In our large cities, with floor space valued at thousands of dollars a square foot, this is a consideration of great importance. Ever since its organization, the Westinghouse Electric & Manufacturing Company has been foremost in the de-velopment of steam and electrical apparatus
