

DR BARBOUR DISCUSSES MORAL TREND OF LIFE

Rochester Theologian Delivers Interesting Message on Second Visit Here.

Combining two texts into one theme, Dr. Clarence A. Barbour, President of the Rochester Theological Seminary, who was the college preacher last Sunday, spoke on the topic, "The Moral Trend of Life." Rev. Barbour's vital and interesting message and his manner of delivery held the attention of all those present throughout his entire address.

Dr. Barbour's main theme was that sooner or later every man finds his own place in life and returns to his own level. As a text, he chose the verses Acts 1:25, "And they gave forth their lots, and the lot fell upon Matthias, and he was numbered with the eleven apostles," and Acts 4:23, "And being let go, they went to their own company, and reported all that the chief priests and elders had said unto them."

Many illustrations were used during his address. People resemble a piece of steel held in one hand attracted by a magnet held in the other. The hand has the power to hold the steel from the magnet, but as soon as the steel is released it flies to the magnet. In the moral trend of life a person, when he is released from all restraint, goes to his real life. He also likened man unto the water in a canal lock. Water is pumped in so that the boat may enter. Then an upper outlet is opened and the water sinks, leveling the level of the water in the next lock. So, man also seeks his own level. A prisoner, while behind the bars makes a resolution of the life that he will lead when once more set free. In most cases, he will drift into his true standing at some time. Since it is human nature for a person to drift into his own level of life and his own standards, laws are made to be obeyed, to try to keep people good and to restrain those who wish to disobey them. There are factors in every community which being let go will sooner or later go to their own place.

In Victor Hugo's novel, "Tollers of the Sea," is found a character which illustrates the unchangeable law of a man seeking his own level. By many acts he had gained a reputation for honesty in his own village. At one instance, he returned several pennies to a storekeeper after many years because he had given him too much change. But suddenly he changed. Underneath it all he was a thief. He had always cherished rascally intentions. Having gained thousands illegally, he intentionally grounded his ship. While the others escaped to the shore, he remained on board and was praised for his bravery. When all had vanished from sight he swam to shore and went to an unknown country where he lived his true life. In the same manner, many persons have a good reputation in their home town. However, he may be judged by his actions at a large city where he thinks that he is unknown. By the places that he visits there, one may learn what kind of a man he really is.

A mummy case over five thousand years old was recently discovered. Among other things in it were found some grains of Egyptian wheat. These were planted and carefully cared for. Even after their long confinement they grew into Egyptian wheat. In the same manner a man finally does what he wishes to do in his heart.

Another rule developed that a man's associations determine his trend of life. A person may be judged by the company which he keeps. If he discovers that his standards are sinking, it is time for him to examine and choose different companions. The widow of John Fiske, the great historian, said his education consisted of forty years as the life companion of John Fiske. Likewise, the best thing that anyone can do is to be the life companion of Christ.

READING ALUMNI TO ATTEND LEHIGH GAME

The Reading Alumni Association held an important meeting on Friday, October twenty-second, at which time plans were discussed for the coming year. E. N. Sullivan, Secretary of the Alumni Association addressed the gathering and outlined the results which an Alumni Association should accomplish.

Plans were formed for an informal dinner for all alumni in that district on November fifth, at which time speakers from the college will be present. It is planned to have all the Reading Alumni attend the Lehigh-Penn State game, which will be held at South Bethlehem on November thirteenth.

Dr. Hunter Upholds American Ideals

"Jahilism is a matter of sentiment and sentiment moves and rules the world," was the big feature of Dr. C. L. Hunter's address of "Now Call to the American Patriot," which was delivered before a large audience in Old Main chapel last Friday evening. Dr. Hunter was brought to State College under the auspices of Washington Camp No. 355, Patriotic Order Sons of America for the special purpose of urging the people to be prepared against the enemy within who lives and is protected by the Stars and Stripes, the silver tongue of oratory.

Dr. Hunter carried his audience back to the days of the Revolutionary War and went on to show that the patriotic action on the part of the colonists was all that saved the country, then but a handful of lower, educated states, from British taxation at the hands of the British. The speaker then lauded the work of Pennsylvania during the Civil War and accorded them with much honor for the victory they attained through the winning of this struggle. The Spanish-American War as well as the recent European struggle was also cited and it was shown that both these wars were waged for loyalty to the ideals of Americanism.

Dr. Hunter then warned against the enemy within and not those outside of the boundaries of the United States. He told of the aims of the Patriotic Order Sons of America and of the program they had started for the purpose of educating young Americans to the ideals of true democracy. Along this line it was pointed out that the organization was instrumental in the passing of a bill compelling children of school age to attend school and also in the passing of a bill whereby it was a per-

offense to desecrate the flag. According to Dr. Hunter, nearly one hundred and fifty thousand members of the organization are active as a guard over the interests of the country and are ever ready to smother any scurrilous propaganda that might be started by an enemy on those shores. The speaker also declared that too many Americans are living in the past and that if the country is to progress that they must look forward in the future and hope for better things.

CHIEF OF PENNSYLVANIA MINERS TO SPEAK FRIDAY  
Mr. S. E. Patton, Chief of the Department of Mines of Pennsylvania, will address the students of the School of Mines the 3rd hour next Friday night, November 5th in Room 200, Old Mining Building. His subject will be "The Use of Electricity in Mines."

News From Other Colleges

PENN.—A Club has been formed for the Chinese of the University. Opportunities will be given to the Chinese students to learn more about the University and campus activities, and to accustom themselves to American educational and religious ideals.

MULLIKENBURG.—The Fresh won the banner rush this year. The yearlings also carried off honors in the pole scrap held last week, because of the fact that they greatly outweighed the Sophomores.

W. and J.—A new evening school has been opened for those students interested along certain lines of study. Courses are offered in literature, economy, political science, sociology, physical science and the Romance languages. The library has been placed at the disposal of the students taking these courses.

TOLEDO.—The organization of a girls basketball team has at last been accomplished. The new team encountered many difficulties at first because the college has no gymnasium of its own and the girls lacked the means for hiring one. The promise of assistance from the college and many individual pledges of aid have cleared this matter up.

PITTSBURGH.—The college has just organized a new Literary Club. The organization is for the purpose of printing a college literary paper, the "Pitt Review" and to study the best contemporary literature.

PITT.—Politics were much in vogue at this institution last week when a mock election was held in State Hall. The Republicans carried the election, receiving four times as many votes as all other candidates combined. Few voters voted, evidently not realizing the recent honor bestowed upon them. In all, 1161 votes were cast by the entire

student body.  
PENN.—Plans for the Freshman's Hall on celebration last Friday night were abandoned by President Bingham and his advisors. This action was taken because it was feared that this activity of the first year men might detract from the football rally on the eve of the Penn-Penn State football contest.

UNIV. OF CINCINNATI.—The annual Fresh-Soph nut rush is to be held here in the very near future. According to a custom at this institution, the vigilance rules on cigarettes will be abandoned providing that the first year men win the rush. If they lose, however, the committee in charge of the enforcement of customs will turn the matter over to the Sophomores.

PENN.—Official enrollment statistics released last Wednesday credit the University with a grand total of 11,055 students, which contrasted with last year's enrollment of 9,820 shows an increase of twenty per cent. The Wharton School students number almost three thousand, according to the report.

How Large is an Atom? ATOMS are so infinitesimal that to be seen under the most powerful microscope one hundred million must be grouped. The atom used to be the smallest indivisible unit of matter. When the X-Rays and radium were discovered physicists found that they were dealing with smaller things than atoms—with particles they call "electrons." Atoms are built up of electrons, just as the solar system is built up of sun and planets. Magnify the hydrogen atom, says Sir Oliver Lodge, to the size of a cathedral, and an electron, in comparison, will be no bigger than a bird-shot. Not much substantial progress can be made in chemical and electrical industries unless the action of electrons is studied. For that reason the chemists and physicists in the Research Laboratories of the General Electric Company are as much concerned with the very constitution of matter as they are with the development of new inventions. They use the X-Ray tube as if it were a machine-gun, for by its means electrons are shot at targets in new ways so as to reveal more about the structure of matter. As the result of such experiments, the X-Ray tube has been greatly improved and the vacuum tube, now so indispensable in radio communication, has been developed into a kind of trigger device for guiding electrons by radio waves. Years may thus be spent in what seems to be merely a purely "theoretical" investigation. Yet nothing is so practical as a good theory. The whole structure of modern mechanical engineering is reared on Newton's laws of gravitation and motion—theories stated in the form of immutable propositions. In the past the theories that resulted from purely scientific research usually came from the university laboratories, whereupon the industries applied them. The Research Laboratories of the General Electric Company conceive it as part of their task to explore the unknown in the same spirit, even though there may be no immediate commercial goal in view. Sooner or later the world profits by such research in pure science. Wireless communication, for example, was accomplished largely as the result of Herz's brilliant series of purely scientific experiments demonstrating the existence of wireless waves. General Electric Company Schenectady, N.Y.

ANNOUNCING Arrangements Have Finally Been Made to Hold the THANKSGIVING DANCE AT THE W. M. PENN Thanksgiving, Nov. 25---9 P. M.

Why are some men still "cigarette shopping"? It must be because they have not found the right cigarette. The right cigarette should not contain too much Turkish, for "too much" makes a cigarette over-rich, even "heavy." Nor should it contain too little Turkish for "too little" means lack of taste. The right cigarette should have just enough Turkish. It should please the taste without tiring it. Scores of sales-records, like the above, seem to prove that the only cigarette which does have just enough Turkish is Fatima. Fatima contains more Turkish than any other Turkish Blend cigarette, yet it is noticeably free from the over-riche-ness of straight, all-Turkish cigarettes. Most smokers quit "shopping" when they find Fatima. LIGHT & MYERS TOBACCO CO. FATIMA CIGARETTES 20 for 25 cents In the regular full-wrapped package. Also obtainable in round AIR-TIGHT case of 50.
