

### COUNTY CLUBS PREPARE FOR CHRISTMAS DANCES

#### Twelve Organizations Will Hold Social Gatherings During Holiday Recess

Indications point toward an unusually busy holiday recess as the many county clubs organized at the institution plan their annual Christmas hop and make the final arrangements for a Penn State reunion in the home town before they return to college in the first week of January.

It seems as though more intend to run dances this year than is usually the case for many have already given their plans publicity with the purpose of acquainting all with the arrangements. Some of those who started the earliest and who seem to have made progress are the Franklin County Club which has not yet definitely decided upon the time when it will hold its dance in Chambersburg; the York County Club which will hold its top at the Coliseum at York, on December twenty-ninth; the Chester County Club which will step out on December thirtieth in the Twentieth Century Hall in West Chester; the Luzerne County Club which has arranged for a dance on December thirtieth in the Cabaret Room of Iron Temple in Wilkes-Barre; and the Lackawanna County Club that has scheduled its dance for December twenty-ninth in the Crystal Ball Room of the Hotel Casey, at Scranton.

Besides, the Delaware County Club dance is slated for the Lansdowne Country Club on December twenty-sixth; the Schuylkill County Club

will be staged at Charlton Hall in Pottsville on December twenty-ninth, the Carbon County Club have arranged for a dance on December twenty-ninth at the Lansford High School gym and the Wayne County Club will hold their dance in the state armory on the preceding day; the Venango County Club dance is to be held in the state armory of Oil City on December twenty-second; the Lebanon County Club dance is to be held at Hotel Meyna in Lebanon on December twenty-ninth; and the Berks County Club in the Berkshire Hotel at Reading on December twenty-seventh.

### SECOND YEAR MEN WIN ANNUAL FOOTBALL SCRAP

(Continued from first page)

was almost a continual display of kicking. Time was taken out quite too often for numerous causes.

The Freshmen received the first break of the game in the middle of the first period by recovering a fumble and, with a little more power would have scored, but a forward pass inter-

cepted by Runser, the Soph center, and this paved the way for the tally which defeated the yearlings. With the ball resting on the forty-three yard line the second year men launched a strong offense and, led by the great plunging of Hynes, made four consecutive first downs which took the ball to within a few yards of the goal. Here a five yard penalty helped greatly and, after three vain attempts to score, Hynes took the ball over for a touchdown.

### Frosh Are Strong in Third Period

The third quarter was probably the best of the day for the Freshmen inasmuch as they held the Sophomores better than in any other period and kept the ball in their opponents' territory all of the time. Twice the Frosh had an excellent chance to score but they lacked the punch after a short spurt or two and were forced to kick. Lowry booted over the goal line twice in this period.

In the final quarter, the situation was almost reversed and the first year warriors were kept on the defensive. An intercepted pass by Armbruster was mainly responsible for this, since

it brought the pigskin into Frosh territory. The Sophs who made the Journey to Washington were rushed into the battle at this point also and helped to make things lively for the Freshmen.

The line-up:

Sophs  
Crowsirt L. E. Frosh  
Singer L. T. McCoy  
Feaster L. G. Parshall

Runser C. Shaner  
Bair R. G. Yost  
Armbruster J. T. Alwine  
Cook R. E. Mahoney  
Patton Q. Hartman  
Lafferty R. H. Kratz  
Carson A. H. Lowry  
Hynes F. Wilson  
Referee—C. H. Beck; Umpire—P. Grimes.  
Substitutions—McQuade for Yost.

Johnson for Armbruster, Kerstetter for Lafferty, Cornwall for Hynes, for Wilson, Crowthers for Singer, Palm Hamilton for Bair.

## In Architecture—

WHEN you go after your first big commission, you'll need something more than a knowledge of stresses and strains, periods and piping. You'll need the atmosphere of success, and the air of knowing your way 'round. One evidence of this familiarity with the world's good things is the habit of preferring that citizen of the world—

# Melachrino

"The One Cigarette Sold the World Over"

Remember that Melachrino is the master blend of only the finest Turkish Tobaccos as originated by Mitides Melachrino. Egyptian cigarettes are simply those that originated in Egypt. But the tobacco is what you want to know about—and if it's Melachrino—it's right.

1898, 500 kw-a. Unit

Beginning with what would now be called the tiniest sort of a unit, a turbine which had a normal rating of 400 hp. at 3000 rpm., Westinghouse has developed turbine construction to a point where three cylinder, two stage, turbines are now in service developing 100,000 hp. And a most significant fact about this development is that practically every step in this progress has been a step forward.

1921, 70,000 kw-a. Unit

## Francis Hodgkinson

DURING the last twenty-five years power generation practice has been revolutionized. The steam turbine has definitely displaced the reciprocating engine as the standard prime mover in large generating equipments. And Francis Hodgkinson has had more to do with this achievement than any other one individual.

Mr. Hodgkinson came to this country along with the Westinghouse Licenses under the Parsons patents, in 1896, upon the recommendation of the inventor himself. Since that time practically every commercial steam turbine Westinghouse has built has been designed and built by him and his able associates.

In this quarter-century of steam-turbine development inventive genius has been paralleled throughout by practical level-headedness. There are few cases in engineering history where the record is writ as clearly and impressively as this. There can be nothing but credit for the engineer who puts his errors underfoot and rises upon them, and most of the world's greatest achievements have been so reached. The World also

honors progress that is surefooted and far-visited, such as the development of steam turbines under Mr. Hodgkinson's direction.

Many inventions of tremendous value in steam turbine practice have been devised and perfected by him and his co-workers. Among the more important of these are the construction, in 1907, of the first low-pressure turbine to be built in America, and in 1911, of the first Bleeder type of turbine; the perfection, in company with H. E. Longwell, of the water-seal gland; a balancing machine for turbine rotors that is almost superhumanly sensitive; a trouble-proof method of supporting turbine cylinders; and a very superior process for affixing turbine blades to rotor and cylinder.

One of the fundamental Westinghouse policies is insistence upon the uttermost in engineering. The observance of this policy in form and in spirit has provided genuine opportunities for many men of remarkable engineering gifts, one of the most notable of whom is the man whose name appears as the title of this article, Francis Hodgkinson.
