Averages That Bloom In The Spring Tra La!

What of these tales of spring fever, of campus trysts, of Whipple's Dam versus Econ class! Statistics show that sunshine and showers and soaring mercury not only are conducive to study, but they produce higher averages every time.

For the past five years, second semester averages for men, women, fraternity brothers, sorority sisters, independent guys and gals, and for the whole lot rolled together have been higher by an average of .07 points. Not much of a jump for an individual, but a noticeable difference in the All-College light.

During this half decade second semester All-College average never went below the 1.41 mark and for the last three years has remained a constant 1.43. First semester averages, on the other hand, have never hit above 1.38 with majority of figures lower than that.
