In the field of advertising instruction, the College ranks in the Other eastern institutions includ-

A new two-year course in turf management, first ever offered by any educational institution, has been announced by the School of Agriculture. The new course of study is expected to start in the Fall.

*Designed to train students for the professional culture and man-agement of tunf on parks, golf courses, estates, cemeteries, airfields and similar grassed areas, the new course has already aroused interest among many returning servicemen. Practical experience is an essential part of the program, and before a certificate of graduation is issued, the student must have two full seasons under competent professional supervision. Experience ob-tained before, during, or after completion of the course may fill this requirement.

The new course provides basic training in fundamental courses of chemistry, botany and bacter-iology, followed by applied courses in agronomy and horticulture, including soils and fertilizers. In addition, the two-year course includes identification, culture, use and maintenance of turf and other plant materials; disease, insect and weed control; and full instruction on tractors and other equipment and ma-chinery used for turf mainten-ance. Numerous electives permit individual choice on related subjects.

Full details on the new course can be obtained from A. L. Beam, director of short courses, Room vania S 203, Dairy Building, the Pennsyl- lege, Pa.

Calendar

TODAY
