'Mama' Proves Technical Problem

The difficulties in the physical production of "I Remember Mama" have provided a great challenge to the technical crews, according to Robert Reifsnider, director.

The show, although it is made up of only two acts, consists of 32 short scenes. Revolving stages which were used in the New York production have been substituted by alternating the action between left, right, and center stage.

There are 120 separate light cues which must come in split-second timing. All lighting equipment available has been put into use.

Blackout screens from the war years will reappear on the windows of Schwab Auditorium to insure complete darkness for the matinee performance.

One of the three sets used in the production has been worked out whereby the audience can see the outside as well as the inside of a room.

In order to understand the production problems better, crew heads were chosen from senior managers and most members from heads of past crews.

The costume crew was announced by Lynette Lundquist, manager. LeRoy Weidner will act as assistant. The members are Margaret Breece, Mary Alice Hodgson, Jo-Marie Jackson, Ann Lantz, Doris Shapiro, Peter Warker and John Wilk.

DEAN HAMMOND

Engineers Revive Open House

"Open House will be held Saturday from 2 p.m. until 10 p.m., when all laboratories will be open and in operation, with the exception of the Ordnance Research Laboratory. It is designed especially for the benefit of high school boys and girls from this section so that they may see what engineering education is like, whether they are thinking of coming to Penn State or some other college."

Visitors should first enter Main Engineering building to see the department of Architecture on the top floor, and the civil engineering and hydraulic laboratories in the basement.

The route will proceed to Engineering A to see the mechanics department, the materials testing lab, and X-ray apparatus. From there visitors may go to Engineering buildings B, C, D and E. (Continued on page two)
