

Workshop Hear Drew Professor

Mrs. Mildred Eakin, professor of religious education at Drew Theological Seminary, Madison, N. J., will speak in 3 Carnegie Hall, at 11 a.m. tomorrow.

Mrs. Eakin's illustrated lecture will be the fifth of the Pennsylvania Workshop series and is open to the public.

Author of "Let's Talk About Religion" and a half-dozen other books, Mrs. Eakin will discuss one of her religion classes which is attended by students of different races and religions. The topic will be "Knowing Our Neighbors."

The workshop, Mary Jane Wyland, professor of education and co-ordinator of the workshop explains, is intended for the experienced teacher, the administrator, or the graduate student who desires to think co-operatively, participate in democratic discussions, work on individual problems, combine study with recreation, and obtain a taste of "general education."

As in past years, a number of prominent persons will appear on the workshop program as special lecturers. These sessions will be held at 11 a.m. in 3 Carnegie Hall, and will be open to the general public. Dates of the talks will be announced from time to time, Miss Wyland said.

Among the special lecturers already announced are Margaret Halsey, author and lecturer; Judge Dorothy Kenyon, a member of the Human Relations Committee of the United Nations; William McAfee, of the division of Chinese affairs, Department of State; and Dr. Charles G. King, scientific director of the Nutrition Foundation, New York.

2500 Visitors Tour Ag School

More farm groups are visiting the School of Agriculture at the College than ever before. More than 2500 persons have toured the College farms and experiment plots this spring. Agricultural extension associations, veterans' training classes, clubs and Granges constitute most of the organized tours.

More visitors indicate preferred interests, with flower gardens leading the preference for women, while dairy herds and pasture experiments vie with machinery for men.

Arrangements for organized tours are made by Prof. A. Leland Beam, 203 Dairy. Such tours touch on research studies of the experiment station as well as shops, classrooms and laboratories of the School of Agriculture. Guide service is available.

Faculty Notes

The Faculty Luncheon Club will not meet during the Main Summer Session, according to Dr. R. Adams Dutcher, of the Steering Committee. He said the staggering of class schedules and the shorter noon hours made it impractical to hold the weekly luncheon sessions.

Dr. George L. Haller, dean of the School of Chemistry and Physics, has been called to active duty for two weeks. A colonel in the Organized Reserve Corps, Haller will serve with the Army Air Forces at Wright Field, Colo.

Mrs. Virginia Hariman, secretary to the president of the College, has tendered her resignation, effective June 30. She had been employed in the Office of the President since 1929 and in 1943 was appointed secretary to the late President Ralph Dorn Hetzel.

Dr. D. S. Cryder, professor and head of the department of chemical engineering, has been named by the American Institute of Chemical Engineers to the 1948 committee of award for chemical engineering achievement.

Marietta C. Henderson, assistant professor of home economics, will leave from New York on Wednesday for a year's stay in Brazil.

With her residence in Rio de Janeiro, Miss Henderson will be in charge of a teacher training program of community nutrition. She will initiate a program designed to improve health through improvement of eating habits. The work is sponsored by the Institute of Inter-American Affairs.

Twelve faculty members from the department of home economics at the College attended the recent meetings of the American Home Economics Association in Minneapolis, Minnesota.

They were: Dr. Grace M. Henderson, Dr. Helen R. LeBaron, Delpha E. Wiesendanger, Dr. Mary L. Dodds, Dr. Winona L. Morgan, Esther A. Atkinson, Jane A. Bovie, Ruth H. Cook, Ruth E. Graham, Marietta C. Henderson, Margaret E. Riegel, and M. Elizabeth Westgate.

A patent on a fuel injection pump for internal combustion engines has been granted jointly to Kalman J. DeJuhasz, professor of engineering research, and F. J. Villforth, a graduate of the College.

The invention was made in connection with a novel type engine being developed by the Texas Company under the patents of E. M. Barber and J. J. Mikita, also graduates of the College, and J. B. Mallin. The Texas Company sponsors a research project relative to this engine in the Engineering Experiment Station at the College. It

is headed by Professor DeJuhasz and Wolfgang E. Meyer, associate professor of engineering research.

Dr. Edward Steidle, dean of the School of Mineral Industries at the College, has been named to the sub-committee on Latin American engineering and mineral industries schools of the Engineers' Council for Professional Development committee on engineering schools.

The function of the sub-committee is to consider accrediting of engineering and mineral industries schools in each of the 20 Latin American countries. In 1944, Dean Steidle inspected all of the mineral industries schools and departments of the Latin American under the sponsorship of the Inter-American Development Commission, Washington.

Dr. J. Paul Selsam was named head of the department of history and Dr. M. Nelson McGeary, head of the department of political science by the Board of Trustees. They will serve until June 30, 1951.

Appointments of Dr. John M. Anderson as acting head of the department of philosophy and Dr. Seth W. Russell as acting head of the department of sociology were also made, effective for one year, beginning Thursday.

Dr. Vernon M. Albers, professor of engineering research, was named assistant director of the Ordnance Research Laboratory, effective Thursday.

ACE Accredits Journ Dept.

Journalism students at the College can continue to be proud of their department, which is one of 35 to be accredited by the American Council on Education for Journalism.

Prof. Franklin Banner, head of the department, claims this is the only college in Pennsylvania, and one of four in the New England and Middle East area, recognized for its work in journalism.

The department rated high and medium high in several fields such as administration, utilization of the college's offering, and of the community's facilities, student accomplishment, student-faculty relations and competence of professors. Graduate placement was especially approved.

The Council, which approved both the news editorial and advertising sequences, consists of representatives of the nation's major newspaper associations and of the American Association of Schools and Departments of Journalism.

School Bells Bring Son, Daughter, Dads, to Class

Soldiers in war and students at Penn State in peace is the story of Frederick and Clyde Weidner, of Clearfield. Both are studying education during main session, enrolled under the GI Bill of Rights.

Head of the Clearfield High School science department, Frederick is working on his master's degree; while Clyde just finished his freshman year at the DuBois Undergraduate Center.

Clyde served as a tail-gunner sergeant with the Eighth Air Force; he spent some time in England. Frederick was stationed three of his five years in England as a communications officer.

Father and son were surprised when they ran into each other one day in Gloucester.

Schwab Holds Sunday Vespers

A series of Sunday evening vesper services to be held in Schwab auditorium has been arranged by the churches of State College in conjunction with the Summer Sessions office of the College. Each program will contain a special speaker and music arranged by the Music Education department.

The schedule for the remainder of the Main Session is as follows: July 11, Dr. Ivan M. Gould, Executive secretary of the Pennsylvania Council of Churches, Harrisburg; July 18, Dr. Herbert King, Grace Congregational Church, New York City; July 25, Dr. G. Morris Smith, President of the Susquehanna University, Selinsgrove; and August 1, Dr. Clyde S. Conley, executive secretary, Synod of Pennsylvania, Presbyterian Churches of the United States, Harrisburg.

Services, which begin at 7:30 p.m., are non-denominational and all students, faculty and friends are invited to attend.

Invention Aids Meteorologists

An inexpensive method of obtaining temperature, humidity, and pressure readings at altitudes up to more than 5000 feet has been devised by Dr. Hans Neuberger, professor of meteorology.

The set-up utilizes a captive balloon to which is attached a modified chronometric radiosonde and an electric buzzer. The balloon is moored with a line of linen or nylon thread, or any other suitable string. The buzzer is cut into the mooring line near the captive balloon and is wired to the meteorosonde. It sets up strong vibrations that are conducted through the mooring line to the ground.

At the base of the mooring line, the signals can be received with the aid of a phonograph reproducer fastened to the string and connected to stethoscope ear pieces by rubber tubing, or a crystal pickup can be used for automatic recording. The system has several advantages over other methods, Dr. Neuberger explained.

In instruments employing the direct recording method, records are not immediately available and a possible failure of the instrument to record therefore cannot be detected until the balloon has landed. The standard radiosonde, because of heavy battery requirements for the radio signal circuit, is ordinarily too heavy for ascents with a captive balloon. Likewise, the transmission of electrical signals through a mooring line necessitates the use of metal wire which adds to the dead weight of the balloon.
