Laura Winder, Beta Sigma Omicron alumna, recently became engaged to William Harsch, a member of Chi Phi fraternity. Miss Winder was an Education major and graduated from the College last Spring. Harsch is a senior in mechanical engineering.

**Smolow—Bugen**

Announcement was recently made of the engagement of Roslyne Bugen, Alpha Epsilon Phi, and William Smolow, of Lafayette College. Miss Bugen is a senior in education. Both are from Easton.

*Co-Edits*

**Beta Sigma Rho**

Joseph Shein was recently elected president of Beta Sigma Rho fraternity. Other officers elected were R. Brett Kranich, vice-president; Murray Weinberger, auditor; Rodney Bergman, recorder; Carl Goldenberg, warden; and Fred Silverman, vice-warden.

**Sigma Phi Alpha**

Frank Glackin took over the duties as president of Sigma Phi Alpha at officer installation. William Butt became vice-president and James Donnell, secretary.

**Zeta Tau Alpha**

An annual party was held by Zeta Tau Alpha for the graduating seniors on Monday night at the home of Marion Judy, Beaver Avenue.

**Correction**

NSA will not sponsor a meeting of All-College Cabinet as announced in Saturday's Collegian reporting NSA's meeting last Thursday. The campus committee requested permission of Cabinet to sponsor such a program, but Cabinet decided that as a sub-committee NSA could not be authorized to do this.

Although all Cabinet meetings are open, student interest has been lacking. Cabinet is planning to hold publicized meetings in a larger room.

**She's wearing our pin...**

*Dame Nature and International Harvester have been "going steady" for a long time*

Just as undergraduates wear pins to indicate their membership in various college organizations, so do employees of International Harvester wear service pins to denote the number of years they have been with the Company. And just as students bestow their pins on favored young ladies, so have Harvester men, in effect, given their pins to Mother Nature.

Because for more than 100 years, the business which is now called International Harvester has been basically one of building an ever-increasing variety of machines to help in the production and conservation of food and raw materials, in the transportation of such articles, and in construction and power projects which change the face and harness the forces of nature.

So we think we are very much in the role of Mother Nature's steady companion.

But proud as we may be of the machines we produce, we think an equally important contribution to the social good has been our development of methods for soil conservation.

Little was known about soil conservation when most colleges and universities were founded, or when the business which is today the International Harvester Company had its start in 1831. But today we all appreciate the need to guard our soil against the ravages of wind and water... and are learning how to do it.

The importance of soil conservation is indicated by the fact that soil scientists estimate that the productivity of 10,000 farms of 100 acres each is seriously impaired each year by lack of proper soil conservation methods. And that more than 700 million tons of surface soil are carried each year by the Mississippi River alone, into the Gulf of Mexico.

It is a source of great satisfaction to International Harvester that it has been able through the years to make a substantial contribution to the progress of soil conservation. We have done this by build-

ing the machinery which makes modern conservation methods possible, and by cooperating with local and national governmental agencies engaged in this important work.

The basic soil conservation work on most farms can be handled by International Harvester's regular line of farm machines, powered by Farmall tractors.

Through continuing research, International Harvester will continue to seek better and better ways to conserve our soil. To continue to be a steady companion to Mother Nature.
