

AAAA Sponsor Aptitude Tests

Aptitude tests for college seniors and other young men and women in the Tri-State area interested in a career in advertising, will be held under the auspices of the Pittsburgh Chapter, American Association of Advertising Agencies on Saturday, February 19. Those interested, who have not as yet done so, are urged to write for applications to Don R. Rudolf, Secretary, P.O. Box 1495, Pittsburgh 30, Pa., as promptly as possible.

The examination for candidates in this area will be held at Frick School, Thackery street, Pittsburgh. The tests on February 19 will cover aptitudes, temperament characteristics and vocational interests. Another series of tests, which are optional, will be held, also at Frick School, on Saturday, February 26. These will cover practical knowledge of seven fields of advertising work.

The examinations both days will begin at 9 a.m. sharp and will last from six to eight hours.

This will be the third set of nationwide tests held under AAAA auspices, the first series in 1947 attracting 544 candidates. The second, in 1948, had 602 candidates. It is emphasized by H. B. Peebles, chairman of the examination committee, Pittsburgh Chapter, AAAA, that although high marks in the tests will be no guarantee of a job, the names and the ratings of all candidates will be sent to personnel directors of all member agencies of the AAAA in the country for consideration when vacancies occur.

Student Attends Bust Unveiling

John T. Biggers, stipend scholar in art education participated in the ceremonies marking the unveiling of a bust of the founder of the Hampton Institute.

The bust, with a head that alone is more than three feet high, was done by Biggers while he was a student at Hampton Institute, Hampton, Va. It is now being cast in bronze at a cost of more than \$1500. It will weigh several tons.

Explanation

Students reading this issue of Collegian on Friday may do a double take when seeing the Saturday date-line, but it's an intentional "error," made necessary by postal regulations.

Since this issue serves for both Friday and Saturday, the next edition will be Tuesday. And it will be dated Tuesday.

Five New Dorms To Hold 1200

Although the strike has temporarily held up the construction of the buildings south and west of Tri-dorms, the new men's dorms are expected to be completed next fall.

Five major dormitory units, providing rooms for 1200 men students, are included in the building plans.

A dining hall capable of serving 1500 men also will be built. It will house a canteen for men, a game room, a lounge, and post office facilities.

One dormitory unit will join Jordan Hall and extend south, parallel to Sparks. A second unit will be built south of the first, joining it by means of a second floor arch.

Another unit will extend southward from Watts Hall, and will join a fourth unit by a similar archway. A terraced court facing Pollock road and the Mineral Industries building will thus be formed by the four new units and the Tri-dorms.

Along the curve where Burrowes and Curtin roads merge, the fifth dormitory unit will be built. The dining hall will join the unit south of Watts Hall, facing Burrowes road.

Lounges, social quarters, pressing and typing rooms, and other conveniences will be provided in the five new units. There also will be a suite for a house mother.

Home economics graduates of the College today are located in every county of Pennsylvania, and in 43 of the 48 states. In 40 years, the degrees conferred on home economists number more than 2000.

"I can't understand why you engineers take this home ec course."

New Traffic Regulations

Here are the new traffic regulations which will go into effect in State College at midnight Sunday, February 6:

South side of Nittany, from Burrowes street to Locust Lane
North side of Fairmount avenue, from Atherion to Garner
Unnamed alley east of High School

NO LEFT TURNS

From College avenue into South Allen street
At intersection of Calder Alley and South Allen street

Workshop Hits Delinquency

A close liaison of civic, educational, and public welfare organizations is an effective way to combat juvenile delinquency.

Margaret A. Neuber, professor of elementary education at the Pennsylvania State College, says that such co-operation is working effectively in the city of York, where a workshop was organized last Fall to study the child with special problems.

More than 80 teachers, school supervisors, and school superintendents joined members of the police department, probation officers, and the mayor of the city in a study of juvenile delinquency as well as other juvenile problems.

The workshop, conducted by Miss Neuber, helped to promote an improved curricula in the Detention School, and also brought improved living conditions. The school program includes academic work, handicrafts, music, art, health education, and physical education, and is similar to the best special class programs in the York schools.

The study of the Detention Home was only one phase of the York Workshop project which dealt with "Education of Exceptional Children." It was conducted under the joint auspices of Penn State and the Department of Public Instruction of York city and county schools.

Publications Open to All

Open to students of all curricula are five undergraduate publications, including the Daily Collegian, campus newspaper; La Vie, College yearbook; Froth, humor magazine; Critique, literary periodical; and the Student Handbook.

The Penn State Engineer, undergraduate technical journal, recruits its staff from those students in the Engineering curricula; and the IFC News Letter, published by the Interfraternity Council, from members of fraternities.

Calls for candidates for all publications are announced in the Daily Collegian shortly after the beginning of classes.
