Phi Mu Alpha, national music honorary, will present its annual spring concert at 3 p.m. tomorrow in Schwab Auditorium. The concert is open to the public.

Approximate Chest Totals To Be Given

Up to date totals of this year's Campus Chest drive and amounts that will be allotted to each group benefiting from the drive will be released Tuesday, William Klisanin, Chest chairman, said yesterday.

The totals will not be final, Klisanin said, because the Chest has not yet received funds from veterans. Veterans donate to the Chest through their book receipts which will be available March 28.

The Campus Chest will also receive the proceeds of the Alpha Phi Omega "Ugly Man" contest this year. Those funds will not be available until after the contest ends March 28.

Klisanin said he will present a plan at the next cabinet meeting for allocation of funds that were originally to be given to the March of Dimes. The March of Dimes turned down Chest funds because it is against national policy to accept money from joint fund-raising groups. Klisanin said late last month that he may attempt to give the money to the March of Dimes by having it donated through All-College Cabinet.

The March of Dimes was to receive six per cent of Chest funds. Groups that will receive money from this year's Chest drive are Penn State Christian Association, 46 per cent; World Student Service Fund, 12 per cent; Scholarship program, eight per cent; Heart Fund, Salvation Army, Leo Houck Cancer Fund, Women's Student Government Association Christmas Fund, six per cent; and State College Community Fund, one per cent. Three per cent of Chest income will be used to cover operating expenses.

Prof Finds Out Cats Dislike Sweet Things

Little children like sweet things. Little doggies like sweet things. So why not little pussy cats? That was the problem, and Dr. Hubert W. Frings, associate professor of entomology, set about to solve it.

It seems a European scientist reported that, while the dog had a liking for sugar and sweet tasting things, the cat did not. Dr. Frings, who has studied the taste spectra of a variety of animals, knew of none that could not taste sweet.

With the assistance of Beverly Cox, a graduate student, Dr. Frings ordered a large-scale cat hunt. The tabbies were rounded up on the farm of Miss Cox's parents near Tyrone.

The cat poachers put their captives in cages. Milk, diluted with water, was used in the experiment because the cats drank whole milk too eagerly and ignored water. When sugar was added to the diluted milk, it was taken eagerly by all the cats. Each time the cats would take the sweetened milk and ignore the rest.

Dr. Frings has devised a "taste spectrum hypothesis" which assumes that the more a substance stimulates the taste, the more sour it is. The substances that are least stimulating are sweet. All of which proves that a cat by any other name still likes milk.

Gridiron Tickets Sale Set

Reserved tickets for the annual Gridiron Banquet will be available to the 350 invited guests 1:30 p.m. Monday at the Student Union desk in Old Main, according to Moylan Mills, president of Sigma Delta Chi, the sponsoring organization. Tickets are priced at \$3.

The banquet will be held at 6:30 p.m. March 26 at the Nittany Lion Inn.

Mills said that invitations should be received Monday by the student, faculty, administrative, and town personalities invited to the dinner which lampoons campus and town events.

He said that Sigma Delta Chi, national professional journalistic fraternity, had kept the price of tickets the same as it had been in previous years despite the rising costs of the banquet.

Guests of honor at the banquet will be President Milton S. Eisenhower and Louis H. Bell, director of public information. Bell will defend the administration in the rebuttal speech after the dinner and the satirical skits are finished.

Modern Bible Version Due In September

A translation of the complete Bible into modern English, on which 32 scholars and theologians have been working for fifteen years, is scheduled for publication next Sept. 30.

The New Testament, the first part of the Bible to be translated, has been available in this Revised Standard version since 1946.

This translation of the New Testament has been the first modern English translation of any part of the Bible to enjoy wide usage among Protestants since the issuance of the King James Version in 1611.

The translation was first authorized in 1929 by the International Council of Religious Education, but the work of translation was not begun until 1937. The council work has since been taken over by the division of Christian education of the National Council of the Churches of Christ in the U.S.A., composed of 29 Protestant denominations and the Eastern Orthodox Church. This group will issue the new translation.

Initiate Becomes 35,000th to Join Alpha Phi Omega

Richard Updegraff, sophomore in wood utilization, has become the 35,000th initiate to be affiliated with the national Alpha Phi Omega service fraternity, Stanley Rapp, local president, has announced.

Updegraff was among 35 students initiated into the local Alpha Beta chapter of Alpha Phi Omega in December. His initiation received national recognition in the fraternity publication "Torch and Trefoil" and from the group's national office in Kansas City, Mo.

The Alpha Beta chapter was reactivated here in 1948 after being disbanded during World War II, Rapp said. The organization was organized in the 1930s, he added.

The local chapter has about 100 active members. The first chapter of Alpha Phi Omega was founded in 1925 at Lafayette College in Easton. There are now 256 chapters in the national organization, Rapp said.

Alpha Phi Omega is a national service fraternity composed of college and university men who have had some affiliation with the Boy Scouts. The fraternity offers service both to the College and the borough, Rapp said.

This year, Rapp continued, the local chapter has pledged 600 hours of work to the borough.

Sound Waves Take Froth off Minerals

The solution to problems caused by froth on chemical and other solutions may be intense high frequency sound.

Dr. Shiou-Chuan Sun, associate professor of mineral preparation, has determined that sound waves are effective in eliminating excessive amounts of tough froth in the flotation of minerals, particularly coals, where it creates trouble in dewatering, filtering, and handling.

Dr. Sun has found that a highly mineralized froth, which can persist in air for four hours, could be collapsed in four seconds when the beaker that contained it was exposed to intense sound.

The process is also effective in keeping the surface of a highly frothable liquid free of foam, Dr. Sun pointed out.
